1.0	First formal release incorporating analysis of the stakeholder engagement	5th June 2020

Executive Summary

This report documents the "Stage 1B Design Principles" element of the Snowdonia Aerospace LLP submission for an Airspace Change Proposal, Reference: ACP-2019-58, Llanbedr Danger Area (DA), under the Civil Aviation Authority (CAA) CAP1616 Airspace Change Process.

Snowdonia Aerospace LLP is continuing to progress and further develop a number of complementary business opportunities at Llanbedr Aerodrome relating to aerospace Research, Development, Test and Evaluation (RDT&E) and military aircraft training. To support these operations (and others) action is required to upgrade and formalise the current airspace around the Aerodrome as the present provision is insufficient to meet the identified future need and risks restricting opportunities that are in the strategic economic interest of the UK and Welsh governments and required to sustain long term employment in the region. Snowdonia Aerospace LLP (hereafter also referred to as the Change Sponsor) is therefore developing two Airspace Change Proposals (ACPs) to underpin these activities:

- ACP-2019-58, Llanbedr Danger Area (DA), which can be accessed online via: https://airspacechange.caa.co.uk/PublicProposalArea?pID=193
- ACP-2020-02, Llanbedr Aerodrome Traffic Zone (ATZ), which can be accessed online via: https://airspacechange.caa.co.uk/PublicProposalArea?pID=211

This document relates to the former application, ACP-2019-58, with a view to creating a permanent Danger Area that will enable Llanbedr Aerodrome to increase support to the RDT&E for next-generation UK aerospace - *e.g.* drones (particularly non-military drones for good), electric aircraft, urban/regional air mobility vehicles, balloons, airships, near-space testing *etc.*

The CAA Civil Aviation Publication CAP1616 defines a six-stage process through to implementation of a permanent airspace change, some of which have more than one step. This document addresses the requirements for Stage 1B: Design Principles.

The design principles encompass the safety, environmental and operational criteria and strategic policy objectives that the Change Sponsor aims for in developing the airspace change proposal. Key to the process is a two-way conversation with relevant stakeholders and interested parties that provides an opportunity to combine local context with technical, operational and safety considerations. The desired outcome is a shortlist of principles to inform the development of airspace design options and against which they can be qualitatively evaluated.

Snowdonia Aerospace (SAC) has undertaken a number of stakeholder engagement activities to help shape the DA design principles. In addition to a number of targeted stakeholder meetings, a questionnaire was also sent out to over 200 stakeholders and interested parties.

The following primary conclusions have been drawn:

1. The responses were consolidated for analytical consistency so as to consider a single response from each separate organisation. This results in a total of 36 independent responses, of which 29 (81%) are positive, 7 (19%) are neutral, and 0 (0%) are negative;
2. The engagement process was a valuable activity as it allowed SAC to refresh and widen relationships with local stakeholders and highlighted the key issues that will help shape the remainder of the Airspace Change Proposal (ACP);
3. Positive responses were received both from the aerospace/aviation community who are seeking to make use of the permanent Danger Area to enhance their products and services and also from the local community who can see the benefit that this business would bring to the regional economy;

4. The neutral responses raised issues/questions relating to two principle factors, (i) the impact of segregation on the flexible use of airspace for other aviation operators, and (ii) the potential noise/general nuisance impact on non-aviation leisure activities in Snowdonia National Park;
5. The draft design principles have been reviewed and revised in light of (4) and the final statement is presented below in Table 1;
6. The Aerodrome Manual will need to be updated to reflect the change in airspace status and agreed operating procedures.

ID	Category	Design Principle
1	Technical / Safety	The airspace design will provide an area of segregated airspace (a Danger Area (DA)) local to Llanbedr Aerodrome for the safe research, development, test and evaluation (RDT&E) of novel aerospace systems
2	Technical	The DA design will also provide an air corridor that will link Llanbedr Aerodrome with the existing Danger Area D201
3	Technical / Operational	The DA design will consist of multiple segments that should, where possible, allow the area of segregated airspace to be kept to a minimum in line with Flexible Use of Airspace principles while still meeting operational requirements
4	Technical / Operational	The DA design will be consistent with the operation of the Aerodrome Traffic Zone (ATZ) (assuming successful conclusion of ACP-2020-02)
5	Safety	The design will not adversely affect the safety of operations at other nearby aerodromes
6	Safety / Operational	Operating hours of the Flight Information Service (FIS) and DA will be linked to ensure consistent traffic procedures and radio calls, and demand for changes in operating hours of the FIS will require a corresponding change in the operating hours of the DA and vice-versa
7	Environmental / Operational	Any impact on the environment and associated leisure activities should, where possible, be minimised via operating procedures and should, where possible, take account of any local development projects or noise sensitive areas that are highlighted as a result of stakeholder engagement
8	Environmental	The design should, where possible, take account of local planning policy including that of the Snowdonia National Park Authority and the aerodrome registered Safeguarding Map
9	Operational	Impact on military aircraft training should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles
10	Operational	Impact on General Aviation (GA), gliding, microlight flying, hang gliding, paragliding or model flying should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles

***Table 1** - Final technical, safety, environmental and operational design principles for ACP-2019-58, Llanbedr Danger Area (DA)*

There were also some general queries raised by the non-aviation community, which SAC has sought to address, namely:

1. The current two-way discussion is an initial "stakeholder engagement" intended to help shape the design principles and not a formal "public consultation" process[1]. There has been no intent on the part of SAC to limit discussion and a full and formal public consultation will be conducted later in the process (Stage 3C, scheduled for Autumn 2020) in line with the Gunning principles and standard Government guidance;
2. The overtly technical nature of the engagement to date is a necessary consequence of where we are in the ACP design process, but opportunities for further general engagement/consultation will be available as per (1).
3. A Danger Area is only one element of a multi-faceted Operating Safety Case (OSC) that will determine where, when and how a novel aerospace system can operate, and an overarching safety assessment will be presented as part of the Stage 2B analysis.

The following recommendations are also made for immediate follow-on activities:

1. SAC will write back to all respondents with a thank you letter and a further explanation of the process, a summary of Stage 1 and 2 findings, and highlighting opportunities for further engagement/consultation;
2. SAC will also consider how engagement/consultation materials are developed to suit a range of audiences, such as how technical information will be communicated in an accessible way to non-aviation stakeholders.
3. SAC will ensure that all future direct written communication is provided in both English and Welsh languages.

[1] CAP1616 defines "consultation" as a formal process seeking input into a decision, undertaken in line with the Gunning principles and Government guidance, and "engagement" as a catch-all term for developing relationships with stakeholders, covering a variety of activities including but not limited to consultation, information provision, regular and one-off meetings and forums, workshops and town hall discussions.

Table of Contents

1. Introduction

1.1. Background

Llanbedr Aerodrome (EGFD), Gwynedd (Figures 1a-1d), is sited on a coastal promontory at the northerly end of Cardigan Bay[2] with bi-directional over-water approaches to the 2000m+ main runway (17/35), which is at an elevation of 8m above mean sea level. There are two additional cross runways 05/23 and 15/33. Under upcoming aerodrome licensing proposals it is currently intended the runways will be 2,188m, 1,199 and 799m respectively. The local geography is predominantly coastal lowland and farmland within Snowdonia National Park that is bounded to the east by the Rhinog mountains, which rise to 756m at a distance of 9500m (approx.) from the main runway. The village of Llanbedr (population 645, 2011 census) is 2000m (approx.) to the north-east of the northern threshold and there's also a transitory population during summer months at the Shell Island campsite (approx. 1000m to the north-west of the main runway northern threshold) and the Dyffryn caravan park (approx. 500m to the south of the main runway southern threshold). The overall population density is consistent with that for Gwynedd as a whole - *i.e.* <50 people per square km[3,4].

Fig. 1a *- aerial view looking west*

Fig. 1b *- aerial view looking east*

Fig. 1c *- aerial view looking north*

Fig. 1d *- aerial view looking south*

Llanbedr Airfield has a long history and established use for the research, development, test and evaluation (RDT&E) flying activities, particularly associated with the use of target drones, and also as a secondary/tertiary operating site for RAF Valley (EGOV, approx. 58km north/north-west). An Aerodrome Traffic Zone (ATZ)[5] and the original Danger Area D202 supported these activities prior to QinetiQ/MOD vacating the site in 2004, along with extant Danger Area D201, the closest edge of which is 25km (approx.) south-west of Llanbedr[6].

[5] Aerodrome Traffic Zone (ATZ) as detailed in Article 5 of the Air Navigation Order, 2016, Ref: Air Navigation Order, 2016
[6] Ref: https://www.aurora.nats.co.uk/htmlAIP/Publications/2018-08-02/html/eAIC/EG-eAIC-2018-087-Y-en-GB.html

The airfield currently supports an increasing mix of small (<20kg) and light (<150kg) drone RDT&E and General Aviation (GA) operations together with visiting military aircraft (fixed wing and rotary) and others including the search and rescue (SAR) helicopter from Caernarfon (EGCK, approx. 35km north/north-west), Police helicopter and Air Ambulance. The airspace is currently Class G. A local Flight Information Service (FIS) has been provided to support day-to-day operations and a Temporary Danger Area (TDA)[7] has previously been consulted on and implemented as and when required, either as a whole or in part, to support RDT&E activities and provide a safe corridor to D201. There are GA aircraft operations most flyable days with an average of 100 to 200 movements per month. The airfield has also been designated as one of the candidate sites for a UK Spaceport by the Department for Transport (DFT) and Snowdonia Aerospace LLP has recently received a grant award from the UK Space Agency to generate a Horizontal Spaceport Development Plan.

1.2. Opportunity to be addressed and Statement of Need

Snowdonia Aerospace LLP is continuing to progress and further develop a number of complementary business opportunities at Llanbedr Aerodrome relating to aerospace RDT&E and military aircraft training. To support these operations (and others) action is required to upgrade and formalise the current airspace around the Aerodrome as the present provision is insufficient to meet the identified future need and risks restricting opportunities that are in the strategic economic interest of the UK and Welsh governments and required to sustain long term employment in the region. Snowdonia Aerospace LLP (hereafter also referred to as the Change Sponsor) is therefore developing two Airspace Change Proposals (ACPs) to underpin these activities:

- ACP-2019-58, Llanbedr Danger Area (DA), which can be accessed online via: https://airspacechange.caa.co.uk/PublicProposalArea?pID=193
- ACP-2020-02, Llanbedr Aerodrome Traffic Zone (ATZ), which can be accessed online via: https://airspacechange.caa.co.uk/PublicProposalArea?pID=211

This document relates to the former application, ACP-2019-58, with a view to creating a permanent Danger Area that will enable Llanbedr Aerodrome to increase support to the RDT&E for next-generation UK aerospace - *e.g.* drones (particularly non-military drones for good), electric aircraft, urban/regional air mobility vehicles, balloons, airships, near-space testing *etc*. The Statement of Need for the application is declared as follows:

- *To provide an environment for safe operation of all ongoing aerospace-related Research, Development, Test and Evaluation (RDT&E) activities in the vicinity of Llanbedr Airfield (EGFD) and the ability for associated aircraft to transit safely to/from Danger Area D201 to undertake extended range/endurance/altitude testing (in accordance with extant D201 procedures) without concern for other air traffic.*

The proposal explicitly supports the Airspace Modernisation Strategy (CAP1711) by creating a permanent test zone in which to explore the airspace integration issues associated with new airspace users such as drones that are currently identified as "unknowns" in Chapter 5 of CAP1711.

1.3. The cause of the opportunity and associated factors or requirements

The preface to the UK Government Aerospace Industrial Strategy, 2018, states that:

- *'Environmentally-friendly aircraft will increasingly incorporate electric technologies, and we anticipate more aircraft operating autonomously in the future. New markets for drones and Urban Air Mobility vehicles will be developed. We want the UK to be at the cutting edge of these exciting developments much as we were when Sir Frank Whittle developed the world's first jet engine'.*

Llanbedr has long been a UK national asset for aerospace RDT&E and there has been increased demand in recent years given its ideal location for Beyond Visual Line-of-Sight (BVLOS) drone testing.

[7] Ref: "Request for TDA "Approval in Principle" For UAS operations at Llanbedr Aerodrome", QINETIQ/MS/AD/LET1404197, Sept 2014

These activities have been satisfied to date by use of a Temporary Danger Area, but both customer demand and the need for confidence and reliance are now such that an application for a Permanent Airspace Change is warranted. The combination of safety, operational, technical and environmental factors already pertaining to low volume RDT&E activities is not expected to change. Moving to a permanent Danger Area will allow an increase in throughput to satisfy the market need and provide UK businesses in these sectors with a surety of being able to operate in the UK on a reactive basis. Many UK businesses have chosen to undertake their testing abroad due to the uncertainties around availability of adequate and appropriate commercial trials environments. Figures 2a – 2f below gives an indication of some of the wide variety of novel aerospace systems and applications that have previously been tested at Llanbedr Aerodrome and which would benefit from a permanent Danger Area to help accelerate development and commercial exploitation.

2. Draft Design Principles

2.1. CAP1616 requirements and document scope

The CAA Civil Aviation Publication CAP1616[8] provides guidance on the regulatory process for changing the notified airspace design and planned and permanent redistribution of air traffic, and on providing airspace information.

CAP1616 defines a six-stage process through to implementation of a permanent airspace change, some of which have more than one step. However, it is recognised that requested airspace changes can vary hugely in size, scale and complexity and this variation has led the CAA to scale the process accordingly (CAP1616, Para. 50). Furthermore, the CAA will consider requests from the Change Sponsor for additional scaling of the process when there is a good reason and it is proportionate to do so.

On the 23rd January 2020 the CAA Airspace Regulation team met with Snowdonia Aerospace LLP to discuss an appropriately scaled submission for ACP-2019-58, Llanbedr Danger Area. Subsequent to this meeting, the CAA agreed to a scaled CAP1616 submission with a combined Define, Develop and Assess Gateway in July 2020. To meet this combined Gateway, Snowdonia Aerospace as the Change Sponsor is required to submit the following documents:

- Stage 1A: Assess Requirements - Statement of Need (previously submitted)
- Stage 1B: Design Principles;
- Stage 2A Options Development;
- Stage 2B Options Appraisal.

This document addresses the requirements for Stage 1B: Design Principles. The design principles encompass the safety, environmental and operational criteria and strategic policy objectives that the Change Sponsor aims for in developing the airspace change proposal. Key to the process is a two-way conversation with relevant stakeholders and interested parties that provides an opportunity to combine local context with technical, operational and safety considerations. The desired outcome is a shortlist of principles to inform the development of airspace design options and against which they can be qualitatively evaluated.

The remainder of this section describes the initial set of draft design principles for ACP-2019-58, Llanbedr Danger Area, as put forward by the Change Sponsor. Thereafter, Section 3 details the stakeholder engagement process, Section 4 summarises the stakeholder feedback and an analysis of the impact on the design principles, and Section 5 updates a definitive list of design principles and describes the next steps.

2.2. Initial statement of ACP-2019-58, Llanbedr Danger Area (DA) design principles

The purpose of CAP1616 is to avoid "solutionising" and to impose a structured process that delivers a considered and balanced airspace design and implementation. An important part of Step 1B is for the design principles to be drawn up through discussion between the Change Sponsor and affected stakeholders at this early stage in the process.

In this regard, an initial limited set of draft design principles was drawn up, as per Table 2 below, which sought to capture the basic technical requirements from the Statement of Need and set these within a fundamental operational context – *e.g.* flexible use of airspace (FUA) principles. These draft principles were then included within a questionnaire that was circulated to the stakeholder community along with supplementary questions relating to safety and environmental factors with a view to helping us develop definitive set of design principles.

[8] Ref: https://publicapps.caa.co.uk/docs/33/CAP1616_Airspace%20Change_Ed_3_Jan2020_interactive.pdf

ID	Category	Design Principle
1	Technical	The airspace design will be appropriate to the need described and provide a safe environment for airspace users.
2	Technical	The airspace design must incorporate a sufficient area to accommodate the wide range of anticipated different types of air vehicle requiring to use it for the range of RDT&E purposes.
3	Operational	The airspace design must minimize the impact to other airspace users by activation only when required based on need.
4	Technical / Operational	The airspace design should be as accessible as possible to other users and be managed in accordance with Flexible Use of Airspace (FUA) principles as far as is practicable (Efficiency and Airspace Sharing).
5	Technical / Operational	The airspace design should be in accordance with current airspace regulation and use a pre-existing designation of airspace with established parameters (Conformity, Simplicity and Safety).

***Table 2** - Draft design principles for ACP-2019-58, Llanbedr Danger Area*

3. Engagement Process

3.1. Strategy

The engagement strategy has been dictated very strongly by the impact of the Covid-19 pandemic, the need to avoid face-to-face meetings and to move all communication to email and video/phone conferencing. This introduced a slight hiatus in the immediate aftermath of the UK-wide lockdown on 23rd March 2020, but the breadth and scope of the engagement has not been unduly affected.

We adopted a two-stage engagement process, initially seeking the opinion of the two communities that are most likely to be impacted by the proposed airspace change, namely the current airspace user community, principally associated with operations at RAF Valley, and the residential and land owner community local to Llanbedr via Gwynedd County Council and local community councillors. The initial airspace user community engagement proceeded as planned via teleconference on 26th March 2020. A local community engagement event had been scheduled for 15th April 2020 but had to be rearranged to 12th May via videoconference. This discussion was dominated by issues relating to ACP-2020-02, Llanbedr Aerodrome Traffic Zone (ATZ) and hence issues relating to ACP-2019-58, Llanbedr Danger Area (DA) have been followed up via email and SAC has produced and distributed an additional non-technical summary note in lieu of standalone meeting minutes.

Stage two of the engagement process was to send out a questionnaire document via email to as wide a network of potential stakeholders and interested parties as possible. We drew up a list of additional stakeholders and interested parties based on our existing network of contacts, but also taking into account suggestions made by the user and local communities' representatives. The questionnaire was based on the draft design principles outlined in Section 2.2 but re-cast as questions with additional detail on the associated business opportunity in order to be as open as possible with the stakeholder community and to better solicit opinion. The questionnaires were distributed on 13th May with a requested return date of 29th May, although responses received after this date have still been considered.

The stakeholder feedback and an analysis of the impact on the design principles is summarised in the next section, Section 4.

3.2. List of stakeholders

The questionnaire was distributed to over 200 stakeholders and interested parties. The full list of stakeholders that have been party to the CAP1616 ACP-2019-58, Llanbedr Danger Area (DA) Stage 1B engagement process is detailed at Appendix A.

3.3. Stakeholder engagement questionnaire

The engagement questionnaire that was distributed to the above list of stakeholders is detailed at Appendix B.

3.4. Engagement evidence

Minutes of all of the above meetings, additional notes and the completed questionnaires are provided separately as Annex 1.

3.5. Engagement versus Consultation

The current stakeholder engagement will be augmented by a full public consultation later in the ACP process (Stage 3C). CAP1616 defines "engagement" and "consultation" thus:

- Consultation is a formal process seeking input into a decision, undertaken in line with the Gunning principles and Government guidance;
- Engagement is a catch-all term for developing relationships with stakeholders, covering a variety of activities including but not limited to consultation, information provision, regular and one-off meetings and forums, workshops and town hall discussions.

4. Stakeholder Feedback and Analysis of Design Principles

4.1. General

We received 36 unique responses to the stakeholder questionnaire – *i.e.* a single response from each separate organisation. Of these 36 responses, 29 (81%) were deemed to be positive toward the airspace change proposal, 7 (19%) were deemed to be neutral, and 0 (0%) were deemed to be negative.

In general, we wish to keep separate the two airspace change proposals we are pursuing, namely ACP-2019-58, Llanbedr Danger Area (DA) and ACP-2020-02, Llanbedr Aerodrome Traffic Zone (ATZ), in order to avoid any confusion. However, it is worth noting that we received notably less responses to the DA engagement than for the earlier ATZ engagement having sent the questionnaire to broadly the same communities. The issues raised were also generally less emotive (there were no negative responses), but there were some comments from the non-aviation community that the engagement was overly technical. This is a necessary consequence of where we are in the ACP design process, but we will write back to all stakeholders and interested parties with a thank you letter and a further explanation of the process, a summary of Stage 1 and 2 findings, and highlighting opportunities for further engagement/consultation. SAC will also consider how future engagement/consultation materials can be developed to suit a range of audiences, including how technical information will be communicated in an accessible way to non-aviation stakeholders.

Positive responses were received both from the aerospace/aviation community who are seeking to make use of the permanent Danger Area to enhance their products and services and also from the local community who can see the benefit that this business would bring to the regional economy. Many of the positive responses provided a simple statement of support without commenting on specific design principles, but in the sections below we have taken the general comments together with the more detailed technical, safety, environmental and operational comments/questions highlighted in the neutral responses to revise and refine a definitive set of design principles for ACP-2019-58, Llanbedr Danger Area (DA).

A valuable by-product of the initial stakeholder engagement process is that is has allowed SAC to refresh and widen relationships with other nearby aviation operators, notably with the nearest airfield at Talybont/Peniarth, 11 nautical miles to the south of Llanbedr. Regardless of the Danger Area, the increased communication will contribute to a general enhancement of air safety.

4.2. Technical

Many of comments and questions relating to the technical definition of the proposed airspace change were received from aviation stakeholders who already have a degree of familiarity with the Temporary Danger Area (TDA) and the second of our airspace change proposals that relates to provision of an Air Traffic Zone (ATZ). We have therefore refined the list of technical design principles to explicitly reflect (a) the need for specific segregated airspace features, (b) the intent to partition the airspace and only make active/segregate the minimum area required to support test activities at any given time, and (c) the need to be technically and operationally consistent with the ATZ.

Other comments and questions were received that are more appropriate to a discussion of specific design options and so will be addressed as part of the Stage 2A analysis.

The revised set of technical design principles is stated in Table 3.

ID	Category	Design Principle
1	Technical / Safety	The airspace design will provide an area of segregated airspace (a Danger Area (DA)) local to Llanbedr Aerodrome for the safe research, development, test and evaluation (RDT&E) of novel aerospace systems
2	Technical	The DA design will also provide an air corridor that will link Llanbedr Aerodrome with the existing Danger Area D201
3	Technical / Operational	The DA design will consist of multiple segments that should, where possible, allow the area of segregated airspace to be kept to a minimum in line with Flexible Use of Airspace principles while still meeting operational requirements
4	Technical / Operational	The DA design will be consistent with the operation of the Aerodrome Traffic Zone (ATZ) (assuming successful conclusion of ACP-2020-02)

Table 3 *- Revised technical design principles for ACP-2019-58, Llanbedr Danger Area (DA)*

4.3. Safety

A number of questions were received as to how we intend to ensure safe flying operations when the Danger Area is active. Again, some of the comments and questions are more appropriate in the context of specific design options and will be addressed as part of the Stage 2A analysis, but the fundamental principle that will apply is the provision of a Flight Information Service (FIS) during hours of operation of the Danger Area to ensure consistent traffic procedures and radio calls.

It should be noted that a Danger Area is only one element of a multi-faceted Operating Safety Case (OSC) that will determine where, when and how a novel aerospace system can operate. An overarching safety assessment is a necessary requirement at Stage 2B and hence broader issues relating to possible supporting technology and operating procedures will be addressed at this point.

The revised set of safety design principles is stated in Table 4.

ID	Category	Design Principle
5	Safety	The design will not adversely affect the safety of operations at other nearby aerodromes
6	Safety / Operational	Operating hours of the Flight Information Service (FIS) and DA will be linked to ensure consistent traffic procedures and radio calls, and demand for changes in operating hours of the FIS will require a corresponding change in the operating hours of the DA and vice-versa

Table 4 *- Revised safety design principles for ACP-2019-58, Llanbedr Danger Area (DA)*

4.4. Environmental

As noted previously, there were no outright negative responses and the issues raised were generally less emotive than with the previous ACP-2020-02 ATZ engagement, but a principle environmental factor raised by respondents was the potential noise/general nuisance impact on non-aviation leisure activities in Snowdonia National Park. These issues are explicitly acknowledged in two additional design principles.

The revised set of environmental design principles is stated in Table 5.

ID	Category	Design Principle
7	Environmental / Operational	Any impact on the environment and associated leisure activities should, where possible, be minimised via operating procedures and should, where possible, take account of any local development projects or noise sensitive areas that are highlighted as a result of stakeholder engagement
8	Environmental	The design should, where possible, take account of local planning policy including that of the Snowdonia National Park Authority and the aerodrome registered Safeguarding Map

***Table 5** - Revised environmental design principles for ACP-2019-58, Llanbedr Danger Area (DA)*

4.5. Operational

Operational issues feature in many of the technical, safety and environmental design principles already highlighted above, but recognising the number of comments we received regarding the access to and flexible use of airspace, we have identified two further design principles that explicitly acknowledge the need for operating procedures to minimise the impact on other aviation users and that these may be different for the military and general aviation communities.

The revised set of operational design principles is stated in Table 6.

ID	Category	Design Principle
9	Operational	Impact on military aircraft training should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles
10	Operational	Impact on General Aviation (GA), gliding, microlight flying, hang gliding, paragliding or model flying should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles

***Table 6** - Revised operational design principles for ACP-2019-58, Llanbedr Danger Area (DA).*

5. Conclusions

5.1. Conclusions and recommendations

Snowdonia Aerospace has undertaken a number of stakeholder engagement activities as part of the "Stage 1B Design Principles" element of the Airspace Change Proposal, Reference: ACP-2019-58, Llanbedr Danger Area (DA), under the Civil Aviation Authority (CAA) CAP1616 Airspace Change Process. In addition to targeted stakeholder meetings, a questionnaire was also sent out to over 200 stakeholders. The following primary conclusions have been drawn:

1. The responses were consolidated for analytical consistency so as to consider a single response from each separate organisation. This results in a total of 36 independent responses, of which 29 (81%) are positive, 7 (19%) are neutral, and 0 (0%) are negative;
2. The engagement process was a valuable activity as it allowed SAC to refresh and widen relationships with local stakeholders and highlighted the key issues that will help shape the remainder of the Airspace Change Proposal (ACP);
3. Positive responses were received both from the aerospace/aviation community who are seeking to make use of the permanent Danger Area to enhance their products and services and also from the local community who can see the benefit that this business would bring to the regional economy;
4. The neutral responses raised issues/questions relating to two principle factors, (*i*) the impact of segregation on the flexible use of airspace for other aviation operators, and (*ii*) the potential noise/general nuisance impact on non-aviation leisure activities in Snowdonia National Park;
5. The draft design principles have been reviewed and revised in light of (4) and the final statement is presented below in Section 5.2;
6. The Aerodrome Manual will need to be updated to reflect the change in airspace status and agreed operating procedures.

There were also some general queries raised by the non-aviation community, which SAC has sought to address, namely:

1. The current two-way discussion is an initial "stakeholder engagement" intended to help shape the design principles and not a formal "public consultation" process[9]. There has been no intent on the part of SAC to limit discussion and a full and formal public consultation will be conducted later in the process (Stage 3C, scheduled for Autumn 2020) in line with the Gunning principles and standard Government guidance;
2. The overtly technical nature of the engagement to date is a necessary consequence of where we are in the ACP design process, but opportunities for further general engagement/consultation will be available as per (1).
3. A Danger Area is only one element of a multi-faceted Operating Safety Case (OSC) that will determine where, when and how a novel aerospace system can operate, and an overarching safety assessment will be presented as part of the Stage 2B analysis.

The following recommendations are also made for immediate follow-on activities:

1. SAC will write back to all respondents with a thank you letter and a further explanation of the process, a summary of Stage 1 and 2 findings, and highlighting opportunities for further engagement/consultation;

[9] CAP1616 defines "consultation" as a formal process seeking input into a decision, undertaken in line with the Gunning principles and Government guidance, and "engagement" as a catch-all term for developing relationships with stakeholders, covering a variety of activities including but not limited to consultation, information provision, regular and one-off meetings and forums, workshops and town hall discussions.

2. SAC will also consider how engagement/consultation materials are developed to suit a range of audiences, such as how technical information will be communicated in an accessible way to non-aviation stakeholders.
3. SAC will ensure that all future direct written communication is provided in both English and Welsh languages.

5.2. Final statement of ACP-2019-58, Llanbedr Danger Area (DA) Design Principles

Based upon the responses to the stakeholder engagement questionnaire and associated discussions and analysis presented in Section 4, the final technical, safety, environmental and operational design principles for ACP-2019-58, Llanbedr Danger Area, have been defined as follows:

ID	Category	Design Principle
1	Technical / Safety	The airspace design will provide an area of segregated airspace (a Danger Area (DA)) local to Llanbedr Aerodrome for the safe research, development, test and evaluation (RDT&E) of novel aerospace systems
2	Technical	The DA design will also provide an air corridor that will link Llanbedr Aerodrome with the existing Danger Area D201
3	Technical / Operational	The DA design will consist of multiple segments that should, where possible, allow the area of segregated airspace to be kept to a minimum in line with Flexible Use of Airspace principles while still meeting operational requirements
4	Technical / Operational	The DA design will be consistent with the operation of the Aerodrome Traffic Zone (ATZ) (assuming successful conclusion of ACP-2020-02)
5	Safety	The design will not adversely affect the safety of operations at other nearby aerodromes
6	Safety / Operational	Operating hours of the Flight Information Service (FIS) and DA will be linked to ensure consistent traffic procedures and radio calls, and demand for changes in operating hours of the FIS will require a corresponding change in the operating hours of the DA and vice-versa
7	Environmental / Operational	Any impact on the environment and associated leisure activities should, where possible, be minimised via operating procedures and should, where possible, take account of any local development projects or noise sensitive areas that are highlighted as a result of stakeholder engagement
8	Environmental	The design should, where possible, take account of local planning policy including that of the Snowdonia National Park Authority and the aerodrome registered Safeguarding Map
9	Operational	Impact on military aircraft training should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles
10	Operational	Impact on General Aviation (GA), gliding, microlight flying, hang gliding, paragliding or model flying should, where possible, be minimised via operating procedures in line with Flexible Use of Airspace principles

***Table 7** - Final technical, safety, environmental and operational design principles for ACP-2019-58, Llanbedr Danger Area (DA)*

5.3. Next steps

The design principles stated in Table 7 will be used to help generate the Design Options (Stage 2A) and inform the Design Options Appraisal (Stage 2B). More generally, the conclusions and recommendations will also be used to help inform the Consultation Preparation (Stage 3A).

Appendix A - List of stakeholders

The following list of stakeholders have been party to the CAP1616, ACP-2019-58, Llanbedr Danger Area (DA) Stage 1B engagement process, and have received the engagement questionnaire detailed in Appendix B.

Appendix B - Stakeholder questionnaire

The following questionnaire relating to the CAP1616, ACP-2019-58, Llanbedr Danger Area (DA)Stage 1B engagement process, was based on the draft design principles outlined in Section 2.2 but re-cast as questions with additional detail in order to better solicit opinion. The questionnaires were distributed to the stakeholders listed in Appendix A.

Llanbedr Aerodrome Airspace Change Proposal

ACP-2019-58

12th May 2020

Initial Engagement Letter. Response deadline 29th May 2020

To: All stakeholders and interested parties.

Why are you being contacted?

This document refers to a proposed change of airspace use, surrounding Llanbedr Airfield, the principle purpose of which is to enable research, test, development and experimental (RTD&E) flight of a range of novel aircraft including unmanned air systems (drones), electric aircraft , urban air taxis and space and near space related operations. We are contacting you in order to seek your feedback so as to inform the future Airspace Change Proposal (ACP).

Does this concern me?

If you represent people who fly in North Wales, and, or, organisations that are concerned with North Wales, or you are an individual for whom this proposal may have implications, then you will want to understand this application. We appreciate time is short in order to gather a consensus so we would urge that this email communication is forwarded to anyone in your organisation that may be interested. They can respond through you or directly to us as an individual. Please note that this is an initial engagement to help shape the design and that further comment will be possible as part of a formal public consultation later in the year.

Introduction to this ACP.

All Airspace Change (ACP) proposals in the U.K. are now conducted under a process enshrined in a document called CAP1616 produced by the Civil Aviation Authority (CAA). The entire process is mapped on line and all airspace change proposals can be seen at https://airspacechange.caa.co.uk/ To see proposed changes in relation to Llanbedr Airfield simply go to this link and type in the postcode LL45 2PX. This letter refers to an airspace change proposal reference ACP-2019-58 for the establishment of a Danger Area and this is one of two proposals. An engagement letter reference ACP-2020-02 for an Air Traffic Zone was distributed to a range of stakeholders and interested parties last week. It is required that the two proposals are dealt with entirely separately.

This letter will:

a. Inform you of the scope of the proposed change ACP-2019-58, which is to introduce airspace to enable continued RDT&E in relation to drones, experimental aircraft and spaceflight at Llanbedr Airfield.
b. Inform you of the perceived requirement for change.
c. Seek your feedback especially in relation to the design principles for this proposal.

Where are we?

We, that is Snowdonia Aerospace LLP (SA) who are known as the Change Sponsor (CS), are at the start of a process that is scheduled to complete in August 2021. However, it is very important to

understand that this is your opportunity to make an early contribution which could influence the design principals and the outcome of the design options in relation to this proposal. To participate at this stage we must have feedback returned to us by the deadline highlighted above, May 29th 2020. Before that date we will respond to questions sent to the dedicated email address provided below. There will be a further opportunity to comment in the Consultation Stage which will start later this year.

We are currently at Stage 1B Design Principles. Stage 1A Assess Requirements (including a Statement of Need), has been completed and minutes of various meetings and records of documents submitted have been uploaded to the aforementioned https://airspacechange.caa.co.uk/ under the quoted reference.

Impact of Coronavirus.

SA determined, given the CAA capability to work from home and use telephone conferencing, that it was quite possible that the agreed timeline identified for this ACP to progress might not be affected from this perspective. SA are likewise unaffected in our ability to engage in internal meetings and progress matters.

Having lost the opportunity to engage with the community on 15th April 2020 and with a great deal of uncertainty at that point for all of us about health and welfare of family and friends, we determined that we would engage with stakeholders and interested parties at this stage by email, and seek email responses and exchanges via this method.

Design Principles. (DPs)

The Design Principles will influence the eventual outcome of the type of airspace, its shape, height, and area. With stakeholders and interested parties feedback we will develop the design principles as the criteria by which we can develop Design Options. On the original Statement of Need, and on the above referred to CAA link, the application is referred to as being for a 'Danger Area' (DA). Within this application we have also referenced and illustrated the existing Temporary Danger Area (TDA) as approved in 2014. This is merely for background and context. We must stress that this new application is to start with a blank piece of paper and not merely seek to apply for the current TDA to become a permanent DA. Given the current classifications of airspace in the UK we thought at the time of the application that a DA was appropriate however it may be that stakeholders and interested parties would like to see a different type of airspace or even a new classification of airspace.

We have to start at square one. So, it may be that an important DP is that any airspace should not prohibit the transit of other air traffic. Or, that the airspace should not unnecessarily be over populated areas.

Whatever airspace is designed it would be a DP that the airspace would only be activated for the time that it needs to be used.

Design Principles in relation to the introduction of airspace are also concerned with geography, population distribution, environmental considerations and economic considerations, consequently there is an opportunity to provide local context with technical considerations when considering the Design Principles.

Why we cannot keep using a Temporary Danger Area.

A Temporary Danger Area is something that can be applied for only on the basis that it is temporary. It is not something that CAA policy allows to be repeatedly promulgated for use on a long term basis. Additionally, a Temporary Danger Area application has to be submitted a minimum of 90 days in advance of any proposed activity. This is a barrier to opportunity in the UK because firstly there is no certainty for users that the airspace will be approved, or approved in time. And, secondly it delays innovation, by preventing more spontaneous access to airspace if appropriate, and risks on each application, that technical delay would see the TDA time approval pass and the trial fail.

The operational aim of the proposal.

The TDA described above is now, with increasing demand from the novel aerospace and space sectors for access to dedicated airspace, not able to satisfy that need nor is it acceptable to implement on a regular basis to the CAA. The principle aim of this ACP is to create airspace that will satisfy the growing need for RDT&E in the novel aerospace and space sectors and this is described further and fully in the Statement of Need which can be seen at https://airspacechange.caa.co.uk/ under the quoted reference.

Safety constraints or opportunities.

As a part of the journey of the re-development at Llanbedr Airfield as an aerospace centre we have already made considerable investment in infrastructure and just before lockdown at the end of March 2020 we secured CAA Approval in our own right as an Air Navigation Service Provider (ANSP). This means that we employ the Flight Information Service Officers (FISO) directly and manage all the Safety Management associated with the operation in accordance with Regulation. From a safety opportunity position it means that an Air Traffic service, called a Flight Information Service (FIS), is already approved to provide information to pilots within the existing Class G airspace and likewise to pilots within any different designation a portion of that airspace is given. The radio approval we hold allows the FISO to provide a FIS to a 14nm radius of the aerodrome and to an altitude of 6,000ft.

Operational constraints or opportunities.

The extent (563 acres) and remote coastal location of Llanbedr Airfield provides the principal operational opportunity for the novel aerospace and space sectors. The benefit of flying at Llanbedr Airfield has been illustrated in the application documentation on the aforementioned CAA link. Whilst this is a new airspace application the fact is that some of the first unmanned aircraft ever to fly in the UK were developed and tested at Llanbedr from the 1950's and flown in a large Danger Area that existed for 50 plus years until the Ministry of Defence sold the airfield in 2004. The loss of this DA airspace in 2004 is of course an operational constraint now.

The most recent example of using the Temporary Danger Area referred to was to enable a drone to fly Beyond Visual Line of Sight (BVLOS) to drop a defibrillator on a beach near Barmouth. This drone project was sponsored by the UK Space Agency and the Welsh Ambulance Service and was the initial proof of concept stage of a proposed plan to develop a service to illustrate the benefits of using drones in support of the NHS in rural Wales. The ongoing development of this project will require the need to operate in designated airspace. See photograph below.

Technical constraints or opportunities.

There are no known technical constraints to the introduction of the sort of new airspace envisaged. It is presently Class G airspace which is open to anyone. However, we do want to provide an access corridor to D201 14nm to the south west. Where proposed new airspace will abut the existing Danger Area 201 a buffer policy will be developed in discussion with MOD and in accordance with existing policy

The RAF presently use the airspace although their tactical training area commences at 6,000ft. This is still Class G Airspace but with the advice that it is used for this purpose. There is considerable technical opportunity associated with securing approval of this ACP, namely to research, test, develop and experiment with novel aircraft and subsequently innovate and develop new modern cost effective, safe and environmental friendly air systems including control systems and communications, of conspicuity devices and sensors. For our ANSP, in terms of technology and unmanned traffic management.

Economic constraints or opportunities.

The UK under its Industrial Aerospace Strategy Policy has a strong commitment to continue as one of the most attractive locations for the global aerospace and aviation industries. As part of this the UK is taking a lead in delivering cleaner, quieter and more innovative aircraft. They wish to "fast-track the electrification of flight, exploit the global potential of new urban mobility solutions and pioneer autonomous aviation."

Many of these initial experimental aircraft systems are unable to operate safely in traditional airspace and require extensive RDT&E within a dedicated controlled airspace environment. The lack of a suitable Danger Area for this innovation would be a substantial economic constraint to the UK aerospace sector and leave them behind Europe and the rest of the World. This sector is hugely important to the UK economy. It provides over 120,000 highly skilled jobs. The sector has an annual turnover of £35bn, the majority of which comes from exports to the rest of the world. This is a world-leading industry, driving growth and prosperity across the UK, supporting jobs that pay about 40 per cent above the national average.

Llanbedr with its investment to date, its ongoing investment presently planned, and its history and development of a Centre of Excellence to support this sector, can, with the establishment of a permanent DA, aid the UK in delivering these aspirations.

The policy regulatory framework with which the proposal must comply.

SA are following the process described in detail in CAP1616 as mentioned in the introduction. As part of this we are engaging with potential stakeholders and interested parties to seek their views and comments on the proposed Design Principles to be employed in the development of design options for airspace.

Stakeholders engaged include but are not limited to: the wider drone and space community, RAF Valley, DAATM, QinetiQ, local councils and communities, General Aviation including based GA aircraft owner/operators, regular or previous users, NATMAC and National Air Traffic Services (NATS), local landowners, statutory bodies and parties having an interest in the region.

Engagement.

Specific engagement meetings were set up with the local councils' liaison groups, which included local councils and community representatives, the Welsh Government, Snowdonia Enterprise Zone Board and other members of the Llanbedr Oversight Board, for the 15th April 2020. These meetings had to be cancelled due to Coronavirus. We are proceeding as described above under: 'Impact of Coronavirus'.

A list of all those sent this communication has been complied at Appendix A to this letter.

Presentations and displays used in the CAP1616 process to date are available to view at https://airspacechange.caa.co.uk/ under the quoted reference. These should assist all stakeholders

and interested parties in understanding more fully the context of this ACP and thereby contribute to the development of the proposed Design Principles now being considered.

To enable maximum engagement at this difficult time we have set up a dedicated email response address da.acp@snowdoniaaerospace.com which will be used throughout the CAP 1616 process.

Development of Design Principles (DPs).

CAP 1616 guidance explains that it is important for the DPs to be drawn up through engagement between the CS and affected stakeholders and interested parties at this early stage in the process, and that unanimous agreement on the principles may be unlikely.

SA have drawn up a list of ten proposed design principles for comment upon in the below Questionnaire. Feel free to make comment and also suggest any other principle you think should be incorporated as part of the design principles now being considered. According to your feedback the DPs will be prioritised as to which is felt to be most important and a final list of DPs will be utilized in examination of the Design Option.

Your Responses.

The questions / statements in the Questionnaire below are designed to help us understand any constraints that could be considered during the CAA CAP 1616 Design Principles step of the Define Stage, Design Principles (1B). Please insert your responses below to each of the following questions. Where additional sheets or documents are used please make it clear which specific questions the additional sheets are responding to. ALL documents are to be returned to: da.acp@snowdoniaaerospace.com as previously described. The first 5 questions give an option to agree or disagree. If you agree or disagree it would be helpful to have additional supporting comments to this. If any of the questions are not applicable or relevant, please say so against the appropriate question in the comment box. Please just copy the completed questionnaire pages to send, with any additional supplementary response.

SA, the CS, sees the first Design Principle as the most important as safety is paramount, and the first five as fundamental. But, please also advise if you think the CS should prioritise some DPs over others.

QUESTIONNAIRE IN RELATION TO:

Llanbedr Aerodrome (Danger Area) ACP-2019-58

Representative Organisation:

(Please insert details of the Organisation you are replying on behalf of)

1. The design of airspace is appropriate due to the need described and in order to provide a safe environment for airspace users. (See: Statement of Need.)		
Your response:	Agree	Disagree
Other comment:		
2. The design must allow access to sufficient area to accommodate the wide range of anticipated different types of air vehicle requiring to use it for the range of RDT&E purposes, but could be sub divided		
Your response:	Agree	Disagree

Other comment:		
3. The design must minimize the impact to other airspace users by activation only when required based on need.		
Your response:	Agree	Disagree
Other comment:		
4. The airspace should be as accessible as possible to other users and be managed in accordance with Flexible Use of Airspace (FUA) principles as far as is practicable (Efficiency and Airspace Sharing)		
Your response:	Agree	Disagree
Other comment:		
5 The design should be in accordance with current airspace regulation and use a pre existing designation of airspace with established parameters (Conformity, Simplicity and Safety)		
Your response	Agree	Disagree
Other comment:		
6. Please let us know if there are any day time or night time constraints that you consider the CS could take into account when making this application.		
Your response		
7. Please provide any details of any issues or constraints due to local General Aviation Operations that you believe may have an impact on the airspace design		

Your response
8. Please provide details of any constraints the introduction of this design may have on gliding, microlight flying, hang gliding, paragliding or model flying.
Your response
9. Are there any local development projects, or existing particularly noise sensitive areas, that the CS should be aware of?
Your response
10. Please advise us of any other issues or constraints you feel the CS could consider when designing its new airspace.
Your response please provide details.

Thank you for your cooperation in completing this questionnaire. Your comments will provide a valuable input to aid development of the Design Principles against which the options for the Danger Area airspace design can be developed.

All completed forms have to be kept to evidence the CS engagement with stakeholders and interested parties but this information remains confidential.

Snowdonia Aerospace LLP / Change Sponsor
