Farnborough Airport - Airspace Change - Informing of Engagement

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Tue 08/11/2022 08:38

Bcc:

Dear Member of Parliament,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details on this proposal, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's 7-stage airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

During Stages 1 and 2 CAP1616 states that engagement should take place with local stakeholders, which will normally include local authorities elected representatives, local community groups, the airport consultative committee and representatives of local General Aviation organisations or clubs. A full public consultation on the airspace change will come later in the process, during Stage 3.

Farnborough are currently in Stage 1 and at this stage we are required to engage with stakeholders to develop and seek feedback on a proposed list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

Farnborough Airport will begin engagement on design principles in December 2022 with stakeholders including, local authorities, local communities, aviation organisations in the area, as well as local airfields, airports, and other airspace users.

If you would like more information on this airspace change proposal please get in touch.

Kind Regards,

Aerodrome Service Co-Ordinator

[Redacted BCC list]

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government’s wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority’s airspace change portal [here](#).

To make this change, Farnborough are going through the CAA’s airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of “design principles” – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Farnborough Airport - Airspace Change - Informing of Engagement

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Tue 08/11/2022 10:11

Bcc:

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Farnborough Airport - Airspace Change - Engagement Workshop Invitations

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Tue 08/11/2022 09:53

Bcc:

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)
3. Workshop 3: Monday 12 December 2022 at the **Aviator Hotel** (1030-1400)
4. Workshop 4: Tuesday 13 December 2022 **ONLINE via Teams** (1730-1930)

Farnborough Airport - Airspace Change - Engagement Workshop Invitations

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Wed 09/11/2022 10:48

To: [REDACTED]

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)
3. Workshop 3: Monday 12 December 2022 at the **Aviator Hotel** (1030-1400)
4. Workshop 4: Tuesday 13 December 2022 **ONLINE via Teams** (1730-1930)

Kind Regards,

Bcc:

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is less than two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Aerodrome Service Co-Ordinator

Bcc:

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is less than two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government’s wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority’s airspace change portal [here](#).

To make this change, Farnborough are going through the CAA’s airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of “design principles” – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)
3. Workshop 3: Monday 12 December 2022 at the **Aviator Hotel** (1030-1400)
4. Workshop 4: Tuesday 13 December 2022 **ONLINE via Teams** (1730-1930)

Dear [REDACTED]

The issue of airspace I think can be over complex. Whilst VFR needs as much Golf airspace as possible to operate in equally controlled airspace should be the minimum required to provide safety and efficient use of type airspace.

The bit that is always missing in ACPs is how the ANSP will provide a service to GA that needs to transit controlled airspace.. Maybe this could be addressed in your proposal..

Regards

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Hi [REDACTED]

I can't remember if I've replied already, but I'm happy just to provide feedback based on the engagement material if that's an option? Otherwise I'll join an online engagement session (depending on date) and then provide MOD feedback by email afterwards.

Kind regards,

Subject: Reminder: Farnborough Airport - Airspace Change - Informing of Engagement

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is less than two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Kind Regards,

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government’s wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority’s airspace change portal [here](#).

To make this change, Farnborough are going through the CAA’s airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of “design principles” – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)

Subject: Farnborough Airport - Airspace Change - Informing of Engagement

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

Thank you for your email response and letting me know .

Once the engagement workshops have taken place, I will then be back in contact with all stakeholders with the design principles and will await your comments and feedback on these.

Should you have any questions then please do not hesitate to say.

Kind Regards,

[REDACTED]

Hello [REDACTED]

Thank you for letting Cranborne Chase Area of Outstanding Natural Beauty Partnership know that Farnborough is embarking on an airspace change.

Tranquillity is a key attribute of this AONB so I am grateful that you are including CCAONB in your consultations.

From a very quick look at your documents it appears that links from Farnborough to Southampton and Bournemouth are the only ones that could potentially impact on this AONB. I sense, therefore, that colleagues at other AONBs, such as Surrey Hills, that are closer to Farnborough are more likely to have greater concerns and more to contribute to your airspace change process.

With very limited resources here, I am declining your invitation to the workshops.

I would, however, be happy to comment on the 'design principles' when they are available.

Regards

Chartered Landscape Architect

Principal Landscape & Planning Officer (part-time, Mon-Wed)

Subject: Farnborough Airport - Airspace Change - Engagement Workshop Invitations

You don't often get email from fasi-s@farnboroughairport.com. [Learn why this is important](#)

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)

Dear [REDACTED]

The operations team at Lasham Gliding Society would certainly be interested in attending an initial engagement workshop with Farnborough. Either via a face to face or online would work for us.

I have distributed your email to both the Chairman of Lasham Gliding Society and also my Deputy CFI, so I am sure that they will both be in contact.

Best Regards.

NOTE: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is less than two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we

Subject: Farnborough Airport - Airspace Change - Engagement Workshop Invitations

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

There are four Phase 1 workshop dates and times to choose from, with 30 available spaces at each, they are a mixture of face to face and online events. These will be allocated on a first come, first served basis. Please let us know which workshop you would like to attend.

1. Workshop 1: Thursday 8 December 2022 at **Rushmoor Borough Council** (1030-1400)
2. Workshop 2: Friday 9 December 2022 **ONLINE via Teams** (1300-1500)
3. Workshop 3: Monday 12 December 2022 at the **Aviator Hotel** (1030-1400)
4. Workshop 4: Tuesday 13 December 2022 **ONLINE via Teams** (1730-1930)

Subject: Reminder: Farnborough Airport - Airspace Change - Informing of Engagement

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is less than two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to develop and seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet.

We will begin our engagement workshops with local authorities, community stakeholders and some industry organisations in December 2022 to create an initial list of design principles. Following these workshops, we will then seek your feedback on this initial list **via email**. If you would be interested in attending one of our online or face to face workshops then please get in touch and we can arrange an invitation.

Once we have received feedback, we will create a final list of design principles with our stakeholders in a second phase of workshops. This second phase is planned for February 2023.

We will be distributing our engagement material and the initial list of design principles mid December 2022 for your feedback by 27th January 2023.

If you have any questions, please get in touch.

Dear

[REDACTED]

[REDACTED] (in copy) kindly forwarded your e-mail to me.

Within the Southdown Gliding Club, we have a small airspace team, with [REDACTED] acting as our Airspace Officer, but including our past-Chairman and myself, as the current Club Secretary. I appreciate that [REDACTED] may have communicated his wish to attend an in-person workshop, but unfortunately myself and my colleague are unavailable on the workshop dates and cannot join him.

I was wondering if it would be possible for myself and colleague to join the ONLINE Teams meeting on Friday 9 December (13:00 to 15:00)? We would share a computer and would only require a single invitation.

Many thanks in advance.

Best regards,

[REDACTED]

Subject: Reminder: Farnborough Airport - Airspace Change - Engagement Workshop Invitations

Dear Stakeholder,

Following on from the email sent a couple of weeks ago, there is two weeks to go before the engagement workshops begin and limited time left to reserve a place.

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

Thank you for your response.

I can confirm that I have reserved a place for you on the engagement workshop being held on Monday 12th December 10:30am – 14:00pm at the Aviator.

Please note, lunch is not included but teas and coffees will be provided. If you are wishing to bring someone with you, then please do make us aware as seating is limited and may not be possible.

Should you have any questions then please do not hesitate to say.

You don't often get email from fasi-s@farnboroughairport.com. [Learn why this is important](#)

CAUTION: This is an EXTERNAL EMAIL. STOP. THINK before you CLICK links or OPEN attachments.

Dear Stakeholder,

Farnborough Airport Ltd have recently commenced a new Airspace Change Proposal (ACP), known as the Farnborough Airport FASI-ACP, to support the Government's wider UK airspace modernisation programme.

More details, including our Statement of Need, can be found on the Civil Aviation Authority's airspace change portal [here](#).

To make this change, Farnborough are going through the CAA's airspace change process, known as [CAP1616](#). The process places great importance on engaging with a wide range of stakeholders throughout the required stages, including potentially affected communities.

At this stage in the process, we are required to engage with stakeholders to initially develop and then seek feedback on a list of "design principles" – a list of high-level criteria that the proposed airspace design should meet. We would like to seek input from you to help us create these design principles.

Our engagement will be in two phases; Phase 1, where we engage with a targeted range of stakeholder organisations (such as local authorities, community and environmental groups and industry stakeholders) through workshops to create an initial list of potential design principles. We will then seek feedback on this list.

Phase 2 will be a second workshop (planned for February 2023) where we will present the feedback received and discuss with you a final list of design principles.

I am perfectly aware of CAPS 1616 requirements, and I am not getting into a lengthy debate regarding "named" stakeholder at this stage. My request still stands and if you choose not to invite me and rely on the process being robust enough to cope with the changes following proper consultation with who FAL perceive to be the "public" in 2024/25 so be it.

Hello,

As stated in the teams meeting, I'm attaching an image of the results of the tranquillity mapping carried out across the park.

Looking at the potentially affected area map on the public proposal page, the airspace changes would look to effect the scattered and isolated tranquil points north of Petersfield (the redder area in the approximate centre of the core area) and reach into the larger patches of wider tranquil landscapes to the south.

Farnborough Airport - Design Principles Engagement - Request For Feedback

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Thu 15/12/2022 14:46

Bcc:

Dear Stakeholder,

As you are aware, Farnborough Airport are currently in Stage 1 of the CAP1616 process on a new airspace change proposal to modernise the Airports airspace. More information can be found on the CAA Portal [here](#).

We have recently held workshops with a wide range of stakeholders to gather initial suggestions on our Design Principles for this proposal.

The 2 documents attached are a copy of the presentation given at the engagement workshops and our feedback document. The feedback document contains a summary of the suggestions for potential design principles made by our stakeholders during 4 workshops held between 8-13 December 2022. Please note these are not Farnborough's final set of proposed Design Principles but are a record of all the suggestion made by stakeholders so far.

We would welcome your thoughts on these suggestions, ranging from Strongly Agree to Strongly Disagree, and any additional comments you might have on these, in particular, if you feel a suggestion should be a 'must' or a 'should' design principle.

If you have any additional suggestions for design principles, including any prioritisations/importance of any particular principle, please let us know in the table at the end of this document.

We have also included a 'Frequently Asked Questions' section at the end of the document, to answer some of the common themes from our workshops.

We would welcome your thoughts on this list and any additional feedback by Friday 27 January 2023. We will use your feedback to help consolidate the suggestions into a succinct set of Design Principles to be shared with you, at the next round of engagement towards the end of February 2023.

The feedback document contains a summary of the suggestions for potential design principles made by our stakeholders during 4 workshops held between 8-13 December 2022. Please note these are not Farnborough's final set of proposed Design Principles but are a record of all the suggestion made by stakeholders so far.

We would welcome your thoughts on these suggestions, ranging from Strongly Agree to Strongly Disagree, and any additional comments you might have on these, in particular, if you feel a suggestion should be a 'must' or a 'should' design principle.

If you have any additional suggestions for design principles, including any prioritisations/importance of any particular principle, please let us know in the table at the end of this document.

We have also included a 'Frequently Asked Questions' section at the end of the document, to answer some of the common themes from our workshops.

We would welcome your thoughts on this list and any additional feedback by Friday 27 January 2023. We will use your feedback to help consolidate the suggestions into a succinct set of Design Principles to be shared with you, at the next round of engagement towards the end of February 2023.

Kind Regards,

Hi [Redacted]

Thank you for your time at the meeting last night.

If at all possible could you please send on some illustrations showing the existing arrival and departure routes for Farnborough airport? I am still relatively new to the airspace modernisation process and it would be helpful to understand how, if at all, the existing aircraft routes impact on the District of Mole Valley.

Kind regards

Dear [REDACTED]

Thank you for your email and also attending the workshop on Tuesday evening.

The 2 documents attached are a copy of the presentation given at the engagement workshops and our feedback document. The presentation does include the existing arrival and departure routes for Farnborough Airport on page 13 and 14 – hopefully this will make things a little clearer but if you wanted any further information then please do not hesitate to say!

The feedback document contains a summary of the suggestions for potential design principles made by our stakeholders during 4 workshops held between 8-13 December 2022. Please note these are not Farnborough's final set of proposed Design Principles but are a record of all the suggestion made by stakeholders so far.

We would welcome your thoughts on these suggestions, ranging from Strongly Agree to Strongly Disagree, and any additional comments you might have on these, in particular, if you feel a suggestion should be a 'must' or a 'should' design principle.

If you have any additional suggestions for design principles, including any prioritisations/importance of any particular principle, please let us know in the table at the end of this document.

We have also included a 'Frequently Asked Questions' section at the end of the document, to answer some of the common themes from our workshops.

We would welcome your thoughts on this list and any additional feedback by **Friday 27 January 2023**. We will use your feedback to help consolidate the suggestions into a succinct set of Design Principles to be shared with you, at the next round of engagement towards the end of February 2023.

Good morning [REDACTED]

Thank you for your email.

It is my understanding that you are not a named stakeholder on FAL's stakeholder list, and so at present we are not accepting feedback from the general public. However, in the next stages to come – general public will have the opportunity to attend workshops and also provide feedback.

When we are at this stage I will be sure to reach back out to you.

Kind Regards,

Good Morning [REDACTED]

How do we make our representation in the feedback you are seeking for input to the design principles for the airspace redesign ? I have received a copy of the Matrix that has been created. As a resident of Churt we have been severely impacted by the recent changes which are causing high levels of noise from the regular overflight of the Southern Star implementation, something which did not happen prior to the recent change.

Reminder: Farnborough Airport - Design Principles Engagement - Request for Feedback

FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Fri 13/01/2023 11:40

Bcc:

Dear Stakeholder,

Following my email sent to you on the 15th December, we just wanted to send a reminder.

As you are aware, Farnborough Airport are currently in Stage 1 of the CAP1616 process on a new airspace change proposal to modernise the Airports airspace. More information can be found on the CAA Portal [here](#).

We have recently held workshops with a wide range of stakeholders to gather initial suggestions on our Design Principles for this proposal.

The 2 documents attached are a copy of the presentation given at the engagement workshops and our feedback document. The feedback document contains a summary of the suggestions for potential design principles made by our stakeholders during 4 workshops held between 8-13 December 2022. Please note these are not Farnborough's final set of proposed Design Principles but are a record of all the suggestion made by stakeholders so far.

We would welcome your thoughts on these suggestions, ranging from Strongly Agree to Strongly Disagree, and any additional comments you might have on these, in particular, if you feel a suggestion should be a 'must' or a 'should' design principle.

If you have any additional suggestions for design principles, including any prioritisations/importance of any particular principle, please let us know in the table at the end of this document.

We have also included a 'Frequently Asked Questions' section at the end of the document, to answer some of the common themes from our workshops.

We would welcome your thoughts on this list and any additional feedback by Friday 27 January 2023. We will use your feedback to help consolidate the suggestions into a succinct set of Design Principles to be shared with you, at the next round of engagement towards the end of February 2023.

Kind Regards,

Reminder: Farnborough Airport - Design Principles Engagement - Request for Feedback

Farnborough Airport- Design Principle Feedback & Phase 2 Engagement Workshop Invitation

FAI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Wed 25/01/2023 15:45

Bcc:

Dear Stakeholder,

Thank you very much to those of you were able to attend our workshops on Design Principles for our new airspace change proposal in December 2022. Further information on our proposal is available on the CAA Portal here.

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list. There is still time to provide feedback on that list, the deadline is COP on **Friday 27th January 2023** (please let us know if you need more time), we have attached the matrix we developed and would welcome your thoughts.

Following analysis of the feedback received; we will create a single list of Design Principles we propose to use for this airspace change. We will be holding further workshops to present the feedback we received from stakeholders and to gather your opinions on our proposed design principles. There are 3 workshops to choose from:

- Wednesday 1st March: 17:00 to 19:00 (Online via TEAMS)
- Thursday 2nd March: 10:00 to 12:00 (Online via TEAMS)
- Friday 3rd March: 10:00 to 12:00 (F2F at Rushmoor Borough Council Offices)

Each workshop will have 30 spaces available and so will be on a first come first serve basis.

Please let us know which workshop you would like to attend by **Monday 27th February 2023**. If you have any questions, please get in touch with the team at fasi-s@farnboroughairport.com.

Kind Regards,

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list. There is still time to provide feedback on that list, the deadline is COP on **Friday 27th January 2023** (please let us know if you need more time), we have attached the matrix we developed and would welcome your thoughts.

Following analysis of the feedback received; we will create a single list of Design Principles we propose to use for this airspace change. We will be holding further workshops to present the feedback we received from stakeholders and to gather your opinions on our proposed design principles. There are 3 workshops to choose from:

- Wednesday 1st March: 17:00 to 19:00 (Online via TEAMS)
- Thursday 2nd March: 10:00 to 12:00 (Online via TEAMS)
- Friday 3rd March: 10:00 to 12:00 (F2F at Rushmoor Borough Council Offices)

Each workshop will have 30 spaces available and so will be on a first come first serve basis.

Subject: Farnborough Airport- Design Principle Feedback & Phase 2 Engagement Workshop Invitation

Dear Stakeholder,

Thank you very much to those of you were able to attend our workshops on Design Principles for our new airspace change proposal in December 2022. Further information on our proposal is available on the CAA Portal here.

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list. There is still time to provide feedback on that list, the deadline is COP on **Friday 27th January 2023** (please let us know if you need more time), we have attached the matrix we developed and would welcome your thoughts.

Following analysis of the feedback received; we will create a single list of Design Principles we propose to use for this airspace change. We will be holding further workshops to present the feedback we received from stakeholders and to gather your opinions on our proposed design principles. There are 3 workshops to choose from:

- Wednesday 1st March: 17:00 to 19:00 (Online via TEAMS)
- Thursday 2nd March: 10:00 to 12:00 (Online via TEAMS)
- Friday 3rd March: 10:00 to 12:00 (F2F at Rushmoor Borough Council Offices)

Each workshop will have 30 spaces available and so will be on a first come first serve basis.

Please let us know which workshop you would like to attend by **Monday 27th February 2023**. If you have any questions, please get in touch with the team at fasi-s@farnboroughairport.com.

Kind Regards,

[REDACTED]

Hi

Please find attached my completed matrix document. I am new to the field of aviation, so my opinions probably have limited value! I am the environmental representative on the FACC, so most of my knowledge is in that area. I have a lot to learn around the technical side of aviation,

In terms of the next round of workshops, would it be possible for me to join the one on 1 March online?

Many thanks

Good afternoon [REDACTED]

Thank you for your email response and I hope that you are well.

I have noted that you do not wish to attend the engagement workshops however we will be sure to carry on including you within all engagement. Once the next workshops have completed, I will be sending across the slides that were used and information on the next steps going forward.

Should you have any questions at any point then please do not hesitate to get in touch.

Kind Regards,

[REDACTED]

Dear Sir/ Madam,

Consultation - **Farnborough Airport - Design Principle Feedback & Phase 2 Engagement Workshop Invitation.**
Our ref - [REDACTED]

Natural England do not feel that we need to attend the workshops. Although, we would like to be kept well informed as the project develops in case our involvement may be required.

We would like to be kept informed due to the close proximity of the airport to component parts of the Thames Basin Heaths Special Protection Area (SPA).

We thank you for notifying us of these planned engagement workshops and we look forward to hearing more as the project progresses.

Kind regards,

[REDACTED]

Dear Stakeholder,

Thank you very much to those of you were able to attend our workshops on Design Principles for our new airspace change proposal in December 2022. Further information on our proposal is available on the CAA Portal here.

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list. There is still time to provide feedback on that list, the deadline is COP on **Friday 27th January 2023** (please let us know if you need more time), we have attached the matrix we developed and would welcome your thoughts.

Dear Stakeholder,

Thank you very much to those of you were able to attend our workshops on Design Principles for our new airspace change proposal in December 2022. Further information on our proposal is available on the CAA Portal [here](#).

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list.

Following analysis of the feedback received; we will create a single list of Design Principles we propose to use for this airspace change. We will be holding further workshops to present the feedback we received from stakeholders and to gather your opinions on our proposed design principles. There are 3 workshops to choose from:

- Wednesday 1st March: 17:00 to 19:00 (Online via TEAMS)
- Thursday 2nd March: 10:00 to 12:00 (Online via TEAMS)
- Friday 3rd March: 10:00 to 12:00 (F2F at Rushmoor Borough Council Offices)

Each workshop will have 30 spaces available and so will be on a first come first serve basis.

Please let us know which workshop you would like to attend by **Monday 27th February 2023**. If you have any questions, please get in touch with the team at fasi-s@farnboroughairport.com.

Kind Regards,

Dear Stakeholder,

Thank you very much to those of you were able to attend our workshops on Design Principles for our new airspace change proposal in December 2022. Further information on our proposal is available on the CAA Portal [here](#).

During those workshops we developed an initial long list of suggested design principles with the stakeholders who attended and have been seeking feedback from our all stakeholders on that list.

Following analysis of the feedback received; we will create a single list of Design Principles we propose to use for this airspace change. We will be holding further workshops to present the feedback we received from stakeholders and to gather your opinions on our proposed design principles. There are 3 workshops to choose from:

- Wednesday 1st March: 17:00 to 19:00 (Online via TEAMS)
- Thursday 2nd March: 10:00 to 12:00 (Online via TEAMS)
- Friday 3rd March: 10:00 to 12:00 (F2F at Rushmoor Borough Council Offices)

Each workshop will have 30 spaces available and so will be on a first come first serve basis.

Please let us know which workshop you would like to attend by **Monday 27th February 2023**. If you have any questions, please get in touch with the team at fasi-s@farnboroughairport.com.

Kind Regards,
[REDACTED]

Hello [REDACTED]

Thank you for the invitation. However, as I am only here 3 days per week and we have a huge backlog at the moment [very limited staff resources] I am going to have to miss the Workshop.

However, I'm confident you have a reasonable understanding of this AONB's position from our previous correspondence, and will take it into account.

[Redacted BCC list]

Dear Stakeholder,

Thank you very much to those of you were able to attend our second round of workshops between 1st to the 3rd March 2023 on Design Principles for our new airspace change proposal. Further information on our proposal is available on the CAA Portal [here](#).

In the workshops we presented a summary of the feedback we received from our first phase of engagement and shared a draft set of design principles for our airspace change proposal.

During the workshops, some stakeholders suggested changes to our proposed design principles, some of which we have incorporated in the list, you can see the original version alongside proposed changes in the presentation. We would now welcome your feedback on that list of design principles.

Please let us have your feedback by COP on **Friday 31st March 2023**. We have also provided an updated FAQ document, with some of the questions we have received over the course of our engagement so far.

Following analysis of your feedback, Farnborough Airport will then form the final list of design principles for this airspace proposal. This list, along with all our engagement material and the feedback we have received will form part of our Stage 1 submission documents and be submitted to the CAA in April, for a May 2023 gateway.

Farnborough Airport - Request for Feedback - Design Principles

FAI-S Farnborough Airport <fasi-s@farnboroughairport.com>

Tue 07/03/2023 13:02

Bcc:

Dear Stakeholder,

Thank you very much to those of you were able to attend our second round of workshops between 1st to the 3rd March 2023 on Design Principles for our new airspace change proposal. Further information on our proposal is available on the CAA Portal [here](#).

In the workshops we presented a summary of the feedback we received from our first phase of engagement and shared a draft set of design principles for our airspace change proposal.

During the workshops, some stakeholders suggested changes to our proposed design principles, some of which we have incorporated in the list, you can see the original version alongside proposed changes in the presentation. We would now welcome your feedback on that list of design principles.

Please let us have your feedback by COP on **Friday 31st March 2023**. We have also provided an updated FAQ document, with some of the questions we have received over the course of our engagement so far.

Following analysis of your feedback, Farnborough Airport will then form the final list of design principles for this airspace proposal. This list, along with all our engagement material and the feedback we have received will form part of our Stage 1 submission documents and be submitted to the CAA in April, for a May 2023 gateway.

Kind Regards,

FARNBOROUGH AIRPORT FASI-S AIRSPACE CHANGE PROPOSAL

ACP-2022-038

APPENDIX C STAKEHOLDER ENGAGEMENT MATERIAL

Airspace Modernisation Airspace Change Proposal

CAP1616 Stage 1 Engagement – Design Principles

Phase 1 Workshops – December 2022

Welcome & Introductions

Farnborough Airport would like to thank you for taking the time to attend this workshop.

We are in the very early stages of our new Airspace Modernisation Airspace Change Proposal and would like to introduce you to the team we have working on it.

This workshop is about the new Airspace Modernisation Airspace Change Proposal only, if you have any questions or points about current day operations or the Post-Implementation Review for the existing airspace change proposal, please contact Farnborough Airport separately.

Agenda

- UK Airspace Modernisation Strategy (AMS)
- Airspace Change Organising Group (ACOG)
- CAP1616
- What is a design principle & how are they used
- Farnborough Airport's AMS airspace change proposal
- Existing airspace arrangement

BREAK

- Interactive design principles discussion
- Next steps

UK Airspace Modernisation Strategy

In response to tasking from the Department of Transport (DfT), the Civil Aviation Authority published the [Airspace Modernisation Strategy](#) in December 2018 . The new strategy sets out the ways, means and ends of modernising airspace, through initiatives that will modernise the design, technology and operations of airspace.

These include the removal of all fixed routes in upper airspace so aircraft can fly fully optimised routes, a fundamental redesign of the terminal route network using precise and flexible satellite navigation and the focus on electronic surveillance solutions to improve safety and enable better integration of all airspace users.

The overall objective for airspace modernisation is to deliver quicker, quieter and cleaner journeys and more capacity for the benefit of those who use and are affected by UK airspace.

ACOG

Following the publication of the AMS, the aviation industry is working together to deliver airspace modernisation through a coordinated programme.

More than 20 UK airports and NATS are involved in the delivery of this national programme of airspace change, which is being co-ordinated by the [Airspace Change Organising Group](#) (ACOG).

Airports are responsible for designing the arrival and departure routes that support their operations from the ground to around 7000ft. They also take responsibility for the way the airspace is used and developed in this lower portion of airspace.

NATS is responsible for the route network, and for the way the airspace is used and developed above 7000ft. NATS is also responsible for re-designing the airspace above 7000ft.

Farnborough Airport was recently accepted by ACOG and the CAA to join the co-ordinated airspace modernisation programme.

Airports involved in the programme

CAP1616

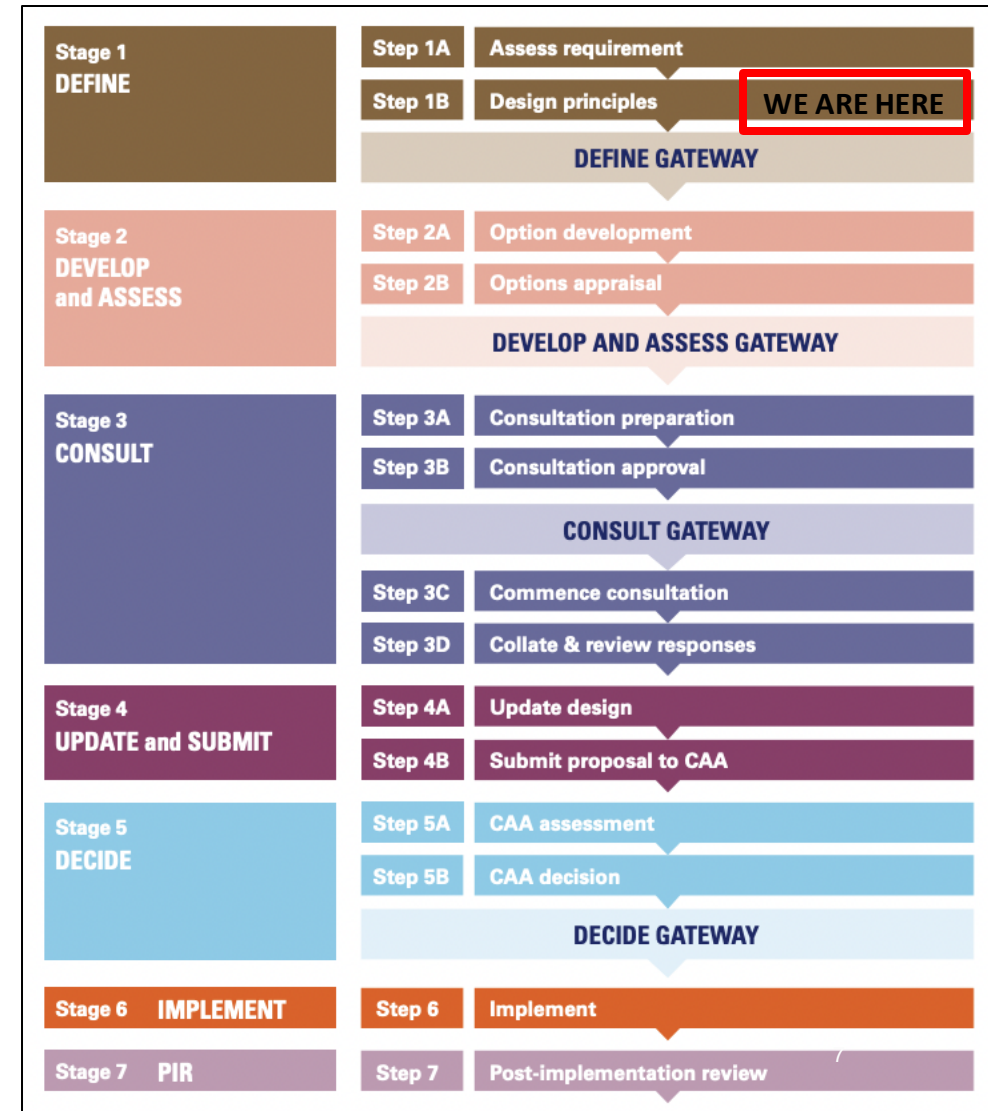

Every organisation that sponsors an ACP must follow the regulatory process for changing the airspace design, including community engagement requirements, known as [CAP1616](#).

CAP1616 was first published in December 2017 and sets out the process for developing airspace options. This involves engaging with affected stakeholders, evaluating the impacts of options, consulting with the public, regulatory approval and implementation.

It is split into 7 stages and the outputs of each stage are reviewed by the CAA to ensure the engagement and analysis is robust, prior to moving to the next stage.

Farnborough Airport are currently in Stage 1 and have completed Step 1A, which is an Assessment Meeting with the CAA and the creation of a Statement of Need for this proposal. Details from the Assessment Meeting can be found [here](#) on the CAA Portal.

Farnborough Airport are now in Step 1B – Design Principles.

What is a design principle?

Design Principles are the objectives that the airport seeks to achieve through the airspace change and help the airspace designers to create and compare different flight path options.

Design principles include policy, safety, environmental (including noise) and operational factors. Some of these are core requirements that we need to include, such as Government policy, but there are other options and trade-offs to choose between when designing future flight paths.

The design principles must also consider local context for the airspace change and take account of priorities within the area affected. Design principles will therefore be drawn up through discussion with a mix of stakeholders that are potentially affected by the airspace change.

This stage of the CAP1616 process is your opportunity to help us develop the design principles for this airspace change.

The design principles will be used later in the process to guide how the airspace change options are developed and evaluated.

How are design principles used?

Design principles can usually be grouped into more broad themes, based around some fundamentals, such as:

- Safety
- Policy
- Noise
- Environment
- Airspace and Aircraft Capabilities/Technology

They also consider operational performance.

During our engagement with a wide-range of stakeholders **we will aim to identify common priorities**. The CAA acknowledges that unanimous agreement of the principles is unlikely and that some design principles may be prioritised over others, and some may contradict each other.

The design options are only evaluated against the design principles in Stage 2A, after that, all formal appraisals are assessed against policy. However, design principles provide a framework for assessing design options at the earliest stage of the design process and ensuring that local priorities are accounted for.

Farnborough Airport's ACP

Statement of Need

The Government and Civil Aviation Authority (CAA) co-sponsor the modernisation of UK airspace to deliver quicker, quieter and cleaner journeys and more capacity for the benefit of those who use and are affected by aviation. The CAA's Airspace Modernisation Strategy (AMS) outlines the initiatives needed to deliver modernisation. One of the most important initiatives is known as FASI South (Future Airspace Strategy Implementation – South), which aims to upgrade the airspace structure and route network that serves London and the Southeast of the UK. The industry is working together to deliver FASI South through a coordinated programme of Airspace Change Proposals (ACPs).

The airports participating in the FASI South programme are responsible for upgrading the arrival and departure routes that support their operations from the ground to 7000ft. NATS En Route Limited (NERL) is responsible for upgrading the airspace structure and route network above 7000ft in a coordinated manner. The Airspace Change Organising Group (ACOG) was established to manage the programme as part of an overall Masterplan, recognising the scale of the proposed upgrades, the number of organisations involved and the complex interdependencies between the constituent ACPs.

Statement of Need

In 2018, NERL produced a feasibility report on behalf of the Government that identified Farnborough as one of nine airports in the London Terminal Manoeuvring Area (LTMA) with significant route interactions. The report concluded that these airports should form part of the minimum group of coordinated ACPs included in the Masterplan to deliver the benefits of modernisation. The existing Masterplan (Iteration 2) does not currently include Farnborough because the airport was not developing a live ACP when ACOG produced the content for the plan in Q3/Q4 2021.

Farnborough recently implemented an ACP that pre-dates the Masterplan Iteration 2, which saw the implementation of Controlled Airspace and Performance-based Navigation (PBN) routes. Whilst this ACP has met its objectives (subject to the Post Implementation Review), constraints associated with the surrounding airspace within the LTMA continue to limit the environmental performance of inbound and outbound traffic flows to/from the airport, especially the ability for the new routes to deliver Continuous Climb Operations (CCO) or Continuous Departure Operations (CDO). The majority of these limitations arise from the interdependencies between Farnborough's routes and Heathrow and Gatwick operations. As a result, the volume of Controlled Airspace required to safely contain the routes into and out of Farnborough is relatively large and extends for some miles from the airport.

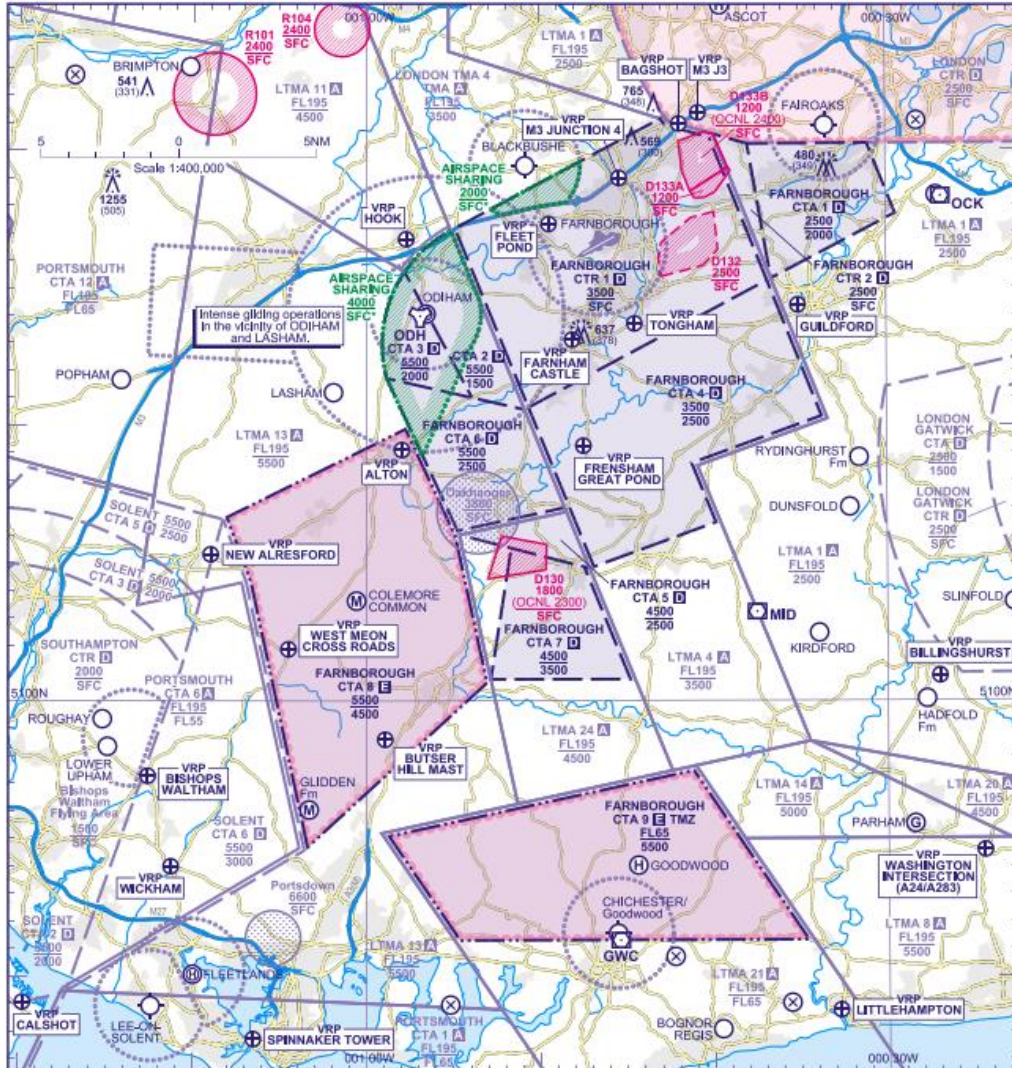

Statement of Need

All the major airports surrounding Farnborough (including Heathrow, Gatwick and Southampton) are participating in the FASI South programme and proactively coordinating their ACPs with NERL to modernise the airspace and improve the vertical and lateral profiles of their routes. To integrate the outputs of these proposals, NERL will be required to make significant changes to the overall LTMA route network that will result in changes to the way arrivals are delivered to Farnborough and the way that the network receives Farnborough's departures.

The widescale airspace upgrades planned for the LTMA through the FASI South programme present an opportunity to potentially improve CCO/CDO performance for Farnborough operations, reduce the volume of Controlled Airspace, create the capacity for efficient growth, appropriately manage the adverse effects of aircraft noise and to reduce CO₂ emissions. To capitalise on the opportunity, Farnborough has decided to start a new ACP that is intended to align with the FASI South programme and help to deliver the airspace modernisation objectives. As a result, Farnborough believes it will be necessary for this proposal to be co-ordinated with the other constituent ACPs in the LTMA Cluster, as described in Masterplan Iteration 2.

Farnborough Airport has been accepted into the Masterplan by ACOG & the CAA, more details can be found [here](#).

Existing Airspace Arrangements

The airspace around Farnborough is incredibly complex.

This is due to a large number of airports (military and civil), airfields and airspace activities in the area.

The existing airspace design, implemented in 2020, sought to minimise the impact on all the surrounding airspace users and communities to the greatest extent possible, whilst still providing the protection of Controlled Airspace to Farnborough's customers.

Farnborough's airspace design and its operation is heavily constrained by what is happening at the surrounding airports, especially Heathrow and Gatwick.

Significantly changing traffic flows to and from other airports was not within scope of Farnborough's last airspace change.

Existing Airspace Arrangements

When the wind blows from the West, Runway 24 is in operation.

This is approximately 70% of the time.

-  Arrivals
-  Departures

Existing Airspace Arrangements

When the wind blows from the East, Runway 06 is in operation.

This is approximately 30% of the time.

➡ Arrivals

➡ Departures

These interactions typically take place between 3000ft and 5000ft. This is due to Heathrow arrivals and departures above, which are often at 6000ft.

What's different this time?

Heathrow, Gatwick, Southampton and NATS are also modernising their airspace.

Crucially, Heathrow are re-designing their flight paths with a view to enabling their departures to climb continuously above 6,000ft. If this is realised, this could provide Farnborough with the opportunity to climb departures higher, sooner and/or keep their arrivals higher for longer.

The result could be less noise, less CO₂ emissions and less Controlled Airspace.

Expectation Management!

- Heathrow is not moving and their departures can only climb so fast!
- Other airfields and airspace users' operations (e.g. Odiham, Lasham, Blackbushe, Fairoaks, Goodwood, Parham, Gatwick.....) must still be catered for.

Break

Design Principle Themes

For Discussion - Safety

- Airspace change can be considered as an opportunity to enhance safety performance, by reducing and even removing risks from the operation.
- The airspace design **must** meet or exceed all relevant national and international safety standards.

Examples of Safety Design Principles

- Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change (Southampton)
- Must be safe (Luton)
- Our new airspace design must be safe (Heathrow)

What are your suggestions for a safety design principle?

Design Principle Themes

For Discussion - Policy

- CAA has a mandatory design principle regarding policy;
Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.
- The airspace design must be compliant with all relevant aviation policy, laws and regulation. This includes Air Navigation Guidance 2017.

Examples of Policy Design Principles

- Must meet the 3 aims of the NPSe, Air Navigation Guidance 2017 and all appropriate Government aviation policies, and updates thereof (Luton)
- Must be in compliance with all laws and regulations (London City)
- Remain in accordance with the CAA's published Airspace Modernisation Strategy and any current or future plans associated with it and all other relevant UK policy, legislation and regulatory standards (for example, Air Navigation Guidance). This includes preventing any worsening of local air quality due to emissions from Heathrow's aircraft movements, to remain within local authorities' limits (Heathrow)

Are there any additional policies you would wish to see included?

Design Principle Themes

For Discussion - Noise

- Government key environmental objectives in ANG17 state that developments in the aviation sector are to;
 - limit and, where possible, reduce the number of people in the UK significantly affected by adverse impacts from aircraft noise

**Should we aim to avoid overflying new communities?
Should we aim to minimise the total population overflown?
Should we prioritise residential areas over parks and open spaces*?**

Examples of Noise Design Principles

- Use noise efficient operational practices to limit and, where possible, reduce adverse impacts from aircraft noise (Heathrow)
- Should avoid overflying the same communities with multiple routes, and take into account routes of other airports, below 7000ft (Luton)
- Should enable continuous climb/descent (Southampton & Luton)
- Keep the number of people who experience an increase in noise from the future airspace design to a minimum (Heathrow)

*ANG17 also states that routes below 7000ft should seek to avoid AONBs & National Parks

Design Principle Themes

For Discussion - Environment

- Government key environmental objectives in ANG17 state that developments in the aviation sector are to;
 - Minimise local air quality emissions and in particular ensure that the UK complies with its international obligations on air quality
- Routes that aim to avoid specific areas can increase track miles which increase CO₂ emissions.
- Trade offs?

Examples of Environment Design Principles

- Should minimise fuel and greenhouse gases (RAF Northolt)
- Should minimise air pollution in the local area from aircraft (London City)
- Minimise, and where possible, reduce aircraft emissions, the degradation in air quality and adverse ecological impacts (Southampton)
- Reduce the contribution to climate change from CO₂ emissions and other greenhouse gas emissions arising from Heathrow's aircraft activities (Heathrow)

What would you like to see included as a design principle?

Design Principle Themes

For Discussion – Airspace and Aircraft Capabilities/Technology

- Advanced navigation standards enable routes to be designed with more precision and flexibility, to avoid noise sensitive areas and buildings.
- We should take advantage of improved profiles from adjacent airports, enabling more efficient profiles for Farnborough's traffic.

What would you like to see included as a design principle?

Examples of Airspace Principles

- Airspace design should adopt the most beneficial form of enhanced navigation standards for arrival and departure routes (Gatwick)
- Must enhance navigation standards by utilising modern navigation technology (London City)
- Should promote optimal network performance in collaboration with other airspace users (London City)
- Enable the efficiency of other airspace users operations (Heathrow)
- Should minimise the impact on other airspace users through;
 - Keeping CAS requirements to a minimum
 - Simple airspace boundaries
 - Allowing flexible use of airspace, where possible (Luton)

Next Steps

Farnborough is engaging with a wide-range of stakeholders on design principles. On completion of our phase 1 engagement, we will collate the design principle suggestions from our stakeholders into a matrix and distribute it, along with these slides. As stakeholders, we would ask you to **complete the matrix and add any additional design principle suggestions or feedback that you wish.**

Following the analysis of the completed matrices and the feedback, we will compose our draft design principles.

We will then re-engage with you and present our proposed, potentially prioritised list of design principles. You will have further opportunity to provide feedback during these sessions.

Proposed by	Suggested DP	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
Farnborough Airport	Must be safe	X					
CAA	Airspace Modernisation DP			x			

Example Matrix

We will then produce our design principles submission for the CAA, which will include records of all our stakeholder engagement. This will be submitted to the CAA for the DEFINE gateway in May 2023.

Once complete, please send the matrix and any additional feedback to fasi-s@farnboroughairport.com

The deadline for feedback is **Friday 27 January 2023**

Any Questions?

Please ask any questions you may have now, or alternatively you can email the team at fasi-s@farnboroughairport.com

Farnborough Airport would like to thank you for your time today and welcome your feedback on the design principles.

Once complete, please send the matrix and any additional feedback to fasi-s@farnboroughairport.com

The deadline for feedback is **Friday 27 January 2023**

Ahead of the Curve

Name..... Organisation/Representing.....

Attended Workshop (online or in-person) Yes/No

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 							<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future							
	Workshop 3	Must enhance safety performance by reducing risks from the operation							
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change							
	Workshop 3	Must be safe for all airspace users							
	Workshop 3	Maintain or enhance safety performance for all airspace users							

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change							
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.							
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated							
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety							
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels							

Workshop 1	<p>Should reduce the frequency of overflight for the same populations where possible by:</p> <ul style="list-style-type: none"> a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities. 							
Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.							
Workshop 2	Avoid overflight of AONBs and National Parks							
Workshop 2	Avoid overflight of rural areas with low ambient noise							
Workshop 3	Avoid populations being newly overflown							
Workshop 3	Should be an overall noise benefit							
Workshop 3	Disperse/share the noise							
Workshop 3	Should provide predictable respite							
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)							
Workshop 3	Steeper approaches and steeper climbs							
Workshop 3	Reduce the number of people affected by noise							
Workshop 3	Share the noise but minimise the impacts							

	Workshop 3	Reduce the area of overflight of AONBs/National Parks							
	Workshop 3	Overfly parks/open spaces when it's dark							
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.							
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.							
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent							
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served							
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities							
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change							
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport							
	Workshop 1,2	Must enable a reduction in the total volume of CAS							
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)							
	Workshop 1	Must enable a reduction in workload per flight							
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC							
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.							
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.							
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS							
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)							
	Workshop 3	Consider use of different airspace classifications							
	Workshop 3	Consider flexible use of airspace							
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities							
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.							

	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields							
Any other design principles we should consider?									

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.	

Airspace Modernisation Airspace Change Proposal

CAP1616 Stage 1 Engagement – Design Principles

Phase 2 Workshops – March 2023

Welcome & Introductions

Farnborough Airport would like to thank you for taking the time to attend this workshop.

This workshop is about the new Airspace Modernisation Airspace Change Proposal only, if you have any questions or points about current day operations or the Post-Implementation Review for the existing airspace change proposal, please contact Farnborough Airport separately.

Agenda

- Recap on Stage 1 process
- Summary of the Statement of Need for this proposal
- Recap of previous Phase 1 Engagement
- Summary of stakeholder feedback received
- Farnborough Airport's proposed Design Principles for your comment
- Discussion
- Next Steps

Recap of Stage 1

Farnborough Airport has joined more than 20 airports in the UK, along with NATS, to meet the UK's [Airspace Modernisation Strategy](#). This strategy, first published in 2018 and updated in 2023 sets out the ways, means and ends of modernising airspace, through initiatives that will modernise the design, technology and operations of airspace.

The overall objective for airspace modernisation is to deliver quicker, quieter and cleaner journeys and more capacity for the benefit of those who use and are affected by UK airspace.

The programme for this airspace change is being co-ordinated by the [Airspace Change Organising Group](#) (ACOG) and Farnborough was accepted by ACOG and the Civil Aviation Authority (CAA) to join the programme in September 2022 and will form part of the next Masterplan iteration.

To carry out an airspace change proposal, sponsors must follow the regulatory guidance set out by the CAA in [CAP1616](#). CAP1616 is split into 7-stages, Farnborough Airport are currently in Stage 1B. Further details on Stage 1A can be found [here](#), on the CAA Portal.

Farnborough Airport's ACP

Summary of the Statement of Need

- Farnborough recently implemented an ACP that pre-dates the Masterplan Iteration 2.
- Whilst this ACP has met its objectives (subject to the Post Implementation Review), constraints associated with the surrounding airspace within the LTMA continue to limit the environmental performance of inbound and outbound traffic flows to/from the airport, especially the ability for the new routes to deliver Continuous Climb Operations (CCO) or Continuous Descent Operations (CDO).
- The majority of these limitations arise from the interdependencies between Farnborough's routes and Heathrow and Gatwick operations.
- As a result, the volume of Controlled Airspace required to safely contain the routes into and out of Farnborough is relatively large and extends for some miles from the airport.

Farnborough Airport's ACP

Summary of the Statement of Need

- All the major airports surrounding Farnborough (including Heathrow, Gatwick and Southampton) are participating in the FASI South programme and proactively coordinating their ACPs with NERL to modernise the airspace and improve the vertical and lateral profiles of their routes.
- To integrate the outputs of these proposals, NERL will be required to make significant changes to the overall LTMA route network that will result in changes to the way arrivals are delivered to Farnborough and the way that the network receives Farnborough's departures.
- The widescale airspace upgrades planned for the LTMA through the FASI South programme present an opportunity to potentially improve CCO/CDO performance for Farnborough operations, reduce the volume of Controlled Airspace, create the capacity for efficient growth, appropriately manage the adverse effects of aircraft noise and to reduce CO₂ emissions.

Heathrow Stage 2
Gateway – August 2023
Gatwick Stage 2 Gateway
– September 2023
Southampton – passed
Stage 2 Gateway in
February 2023

Recap of Phase 1 Engagement

In December 2022 Farnborough Airport carried out engagement with targeted stakeholders on Design Principles for this proposal.

We held workshops, both online and face-to-face and engaged with some stakeholders via email, to learn what elements are important to you, that can be incorporated into Design Principles.

What is a Design Principle?

- Objectives that the airport seeks to achieve through the airspace change and help the airspace designers to create and compare different flight path options.
- Includes policy, safety, environmental (including noise) and operational factors.
- Must also consider local context for the airspace change and take account of priorities within the area affected.

How are Design Principles used?

- The design options are only evaluated against the design principles in Stage 2A, after that, all formal appraisals are assessed against policy.
- However, design principles provide a framework for assessing design options at the earliest stage of the design process and ensuring that local priorities are accounted for.

Summary of Phase 1 Engagement

Farnborough Airport held 4 engagement workshops, both online and face-to-face between 8-13th December 2022.

The result of these workshops was a long list of potential Design Principles **suggested by our stakeholders.**

This list was distributed to all stakeholders who had been invited to attend workshops, even if they had been unable to do so.

It was also emailed to additional industry stakeholders, such as National Air Traffic Management Committee (NATMAC) and other airports within the FASI-S programme.

All stakeholders were given from 15 December 2022 to 27 January 2023 to provide Farnborough with feedback on the long list.

We also asked stakeholders for any further comments on the proposals and if they had any additional suggestions they would like to make.

Overall, we received feedback from 25 stakeholders/stakeholder organisations.

Targeted Stakeholders

Local Authorities
Farnborough Airport Consultative Committee
Local Community Groups
AONBs & Environmental Groups
NATMAC
Aviation businesses based at Farnborough
MOD
Adjacent Airports & Airfields
Airspace Users – GA/Gliding Clubs/Microlight organisations etc

Stage 1 – Design Principles Feedback		FARNBOROUGH AIRPORT						
Name.....		Organisation/Representing.....						
Attended Workshop (online or in-person) Yes/No								
Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g. if this suggestion should be a 'must' or a 'should')
Safety	Must be as safe or safer than today for all airspace users"							<i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Intialia Evaluation</i>
Workshop 1	<i>*Potentially with additional supporting information, for example a) Ensure doesn't degrade below a baseline metric b) Ensure no expected increase in controlled airspace infringements c) Ensure no increase in traffic density patterns outside CAS d) Ensure no increased overflight of aerodrome outside CAS below x000ft</i>							
Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future							
Workshop 3	Must enhance safety performance by reducing risks from the operation							
Workshop 3	Be as safe or safer than today for all airspace users that are affected by the airspace change							
Workshop 3	Must be safe for all airspace users							
Workshop 3	Maintain or enhance safety performance for all airspace users							

Stakeholder Engagement Feedback

Safety

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
S1	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p>*Potentially with additional supporting information, for example</p> <p>a) Ensure doesn't degrade below a baseline metric</p> <p>b) Ensure no expected increase in controlled airspace infringements</p> <p>c) Ensure no increase in traffic density patterns outside CAS</p> <p>d) Ensure no increased overflight of aerodrome outside CAS below x000ft</p>	15	7	1	1	1	
S2	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future	11	9	1	2	1	1
S3	Workshop 3	Must enhance safety performance by reducing risks from the operation	8	7	3	2	2	1
S4	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change	10	9	1	2	1	1
S5	Workshop 3	Must be safe for all airspace users	11	7	3	1		1
S6	Workshop 3	Maintain or enhance safety performance for all airspace users	9	11	3	1		
S7	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change	11	8	2	2		1

- Stakeholders agreed that safety was an important factor for the airspace change.
- Received a range of views on the specifics.
- We have tried to incorporate elements of all the suggestions into our proposed design principle for safety.

Proposed Design Principle

Proposed Safety Design Principle:

Must be as safe or safer than today for all airspace users that are affected by the airspace change*

(*We will set out our methodology for assessing this in Stage 2 with a view to using data e.g., flight density plots/volume nm^3 of CAS, to support other qualitative assessments).

Stakeholder Engagement Feedback

Policy

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
P1	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.	11	8	3	2		1
P2	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated	4	7	8	4	1	1
P3	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety	9	11	3	2		

- Range of views on the CAA design principle.
- Those highlighted with red/pink text have not been directly mentioned in our proposed list of design principles.
- P2 is already covered by Air Navigation Guidance 2017 and P3 is already CAA policy.

Mandated Design Principle

Policy Design Principle:

Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published airspace modernisation strategy (CAP1711) and any current or future plans associated with it.

Stakeholder Engagement Feedback

Noise

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
N1	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels	7	5	9	2		
N2	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.	4	12	5	1	1	1
N3	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.	2	10	9	4		
N4	Workshop 2	Avoid overflight of AONBs and National Parks	4	8	13			
N5	Workshop 2	Avoid overflight of rural areas with low ambient noise	3	6	13	1		1
N6	Workshop 3	Avoid populations being newly overflown	2	7	9	5	1	
N7	Workshop 3	Should be an overall noise benefit	5	14	6			
N8	Workshop 3	Disperse/share the noise	4	12	8			
N9	Workshop 3	Should provide predictable respite	2	13	9	1		
N10	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)	1	11	7	3	1	1
N11	Workshop 3	Steeper approaches and steeper climbs	5	7	11			1
N12	Workshop 3	Reduce the number of people affected by noise	1	12	10	1		
N13	Workshop 3	Share the noise but minimise the impacts	3	9	12	1		
N14	Workshop 3	Reduce the area of overflight of AONBs/National Parks	3	9	12			1
N15	Workshop 3	Overfly parks/open spaces when it's dark	2	4	13	2	2	2
N16	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.	4	9	11	1		

- We have attempted to incorporate all these principles which aren't already captured in government policy in our Design Principles with the exception of:
- N4 & N14, because they are already covered by Air Navigation Guidance 2017.
- N5 because this one contradicts the other DPs and also contradicts Government Policy.
- N10 because we feel the most optimal design that we can get should be used by everyone. If we can achieve more optimal profiles, we would want them flown all the time.
- N15 because it wasn't strongly supported and would be potentially impossible to implement owing to constantly changing hours of darkness.

Proposed Design Principles

Proposed Noise Design Principles:

Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable:

- a. a reduction in total population affected by noise below 7000ft
- b. a reduction in CO₂ emissions per flight from Farnborough aircraft,
- c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS
- d. a reduction in the reliance on tactical intervention

Where lateral changes are required to achieve improved environmental and operational performance, options should:

- a. deliver an overall reduction in flight plannable track miles
- b. minimise populations newly overflown
- c. avoid overflying the same communities with multiple routes to & from Farnborough Airport
- d. avoid overflying the same communities with Farnborough's routes and those routes to & from other airports below 7000ft

Stakeholder Engagement Feedback

Environment

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
E1	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.	7	11	5	1		1
E2	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent	8	11	3	1		
E3	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g., best equipped = best served	4	10	6	1	1	2
E4	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities	6	11	7	1		
E5	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change	6	8	9	1		1

- We have attempted to incorporate all these principles which aren't already captured in government policy in our Design Principles with the exception of:
- E3, because we feel the most optimal design that we can get should be used by everyone. If we can achieve more optimal profiles, we would want them flown all the time.

Proposed Design Principles

Proposed Environment Design Principles:

Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable:

- a. a reduction in total population affected by noise below 7000ft
- b. a reduction in CO₂ emissions per flight from Farnborough aircraft,**
- c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS
- d. a reduction in the reliance on tactical intervention

Where lateral changes are required to achieve improved environmental and operational performance, options should:

- a. deliver an overall reduction in flight plannable track miles**
- b. minimise populations newly overflown
- c. avoid overflying the same communities with multiple routes to & from Farnborough Airport
- d. avoid overflying the same communities with Farnborough's routes and those routes to & from other airports below 7000ft

Stakeholder Engagement Results

Airspace and Aircraft Capabilities/Technology

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered
AA1	Farnborough Airport	Must meet forecast demand for Farnborough Airport	7	10	3	3		
AA2	Workshop 1,2	Must enable a reduction in the total volume of CAS	5	5	9	3		
AA3	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority over simplification)	4	8	9			1
AA4	Workshop 1	Must enable a reduction in workload per flight	1	9	7	2		2
AA5	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC	4	12	7			
AA6	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	7	6	8	1		
AA7	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.	1	6	12	2		1
AA8	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS	3	8	8	1		2
AA9	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)	4	7	9	1		1
AA10	Workshop 3	Consider use of different airspace classifications	2	6	12			1
AA11	Workshop 3	Consider flexible use of airspace	5	9	7			1
AA12	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities	4	11	5			3
AA13	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	4	5	9	1		2
AA14	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'dutch' airfields	1	8	10	1		3

- We have attempted to incorporate all these principles which aren't already captured in government policy in our Design Principles with the exception of:
- AA10 and AA11, because these are refinements on the designs that could be determined through consultation. There are too many variables to consider at Stage 2 of the process which is to first understand the airspace design (constructs) available.
- AA14 because this is Farnborough's ACP. We will, of course, aim to enable benefit to Clutch airfields, but our objectives are focussed on Farnborough's operations.

Proposed Design Principles

Proposed Airspace and Aircraft Capabilities/Technology Design Principles:

Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable:

- a. a reduction in total population affected by noise below 7000ft
- b. a reduction in CO₂ emissions per flight from Farnborough aircraft
- c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS
- d. a reduction in the reliance on tactical intervention

Accommodate forecast demand for Farnborough Airport

Make best use of Farnborough's modern aircraft fleet capabilities

Additional Suggested Design Principle

Additional Suggested Design Principle	Farnborough Response
Minimum impact to GA operations Minimise impact on other airspace users	We believe this suggestion is covered by DP1, 2 and 4
Maintain safe operations in and around the proposed airspace design	We believe this suggestion is covered by DP1
Farnborough's design should aim to remove dependencies with Southampton ATC in order that the two airports can operate with the minimum of interactions. The arrival transitions and departure procedures shall be deconflicted from, and integrate with, the en-route network and Southampton Airport.	This suggestion has been partly incorporated into the proposed design principle list

Additional Feedback/Questions

We also had some additional questions and points raised in the feedback we received. Where possible, these will be incorporated into our evolving FAQ list and distributed to stakeholders.

All the feedback we received and how our design principles evolved will be available in our submission documents.

Prioritisation of Design Principles

The outcome of our first round of engagement is the following shortlist of Design Principles which will help us in the development of our airspace design options and against which they can be qualitatively evaluated.

CAP1616 recognises that some of the design principles may contradict one another, and some may be prioritised over others.

Farnborough Airport have prioritised the following list of Design Principles.

Farnborough Airports Proposed Design Principles

Proposed Design Principles (updated following Workshops 1-3 March 2023)	
1	Must be as safe or safer than today for all airspace users stakeholders that are affected by the airspace change* (*We will set out our methodology for assessing this in Stage 2 with a view to using data e.g., flight density plots outside CAS /volume nm ³ of CAS, to support other qualitative assessments.)
2	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published airspace modernisation strategy (CAP1711) and any current or future plans associated with it.
3	Accommodate Shall not constrain the ability to meet forecast demand for Farnborough Airport
4	Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft , to enable: <ol style="list-style-type: none"> a reduction in total population affected by noise below 7000ft a reduction in CO₂ emissions per flight from Farnborough aircraft, a reduction in the volume and where possible, complexity of Farnborough Airport's CAS a reduction in the reliance on tactical intervention
5	Aim to remove dependencies with Southampton ATC - adjacent ATC units
6	Where lateral changes are required to achieve improved environmental and operational performance, options should: <ol style="list-style-type: none"> deliver an overall reduction in flight plannable track miles minimise populations newly overflown avoid overflying the same communities with multiple routes to & from Farnborough Airport avoid overflying the same communities with Farnborough's routes and those routes to & from other airports below 7000ft
7	Make best use of Farnborough's modern aircraft fleet capabilities
8	Ensure that Farnborough Clutch airways traffic can still be accommodated, as a result of the changes

- During the workshops, we had changes suggested to our proposed list, some of which we have incorporated and are shown in red.
- We have shown the revised text alongside the old text, to request your feedback on this list, rather than the original list shown during the workshops.

Next Steps

We would now welcome your feedback on our proposed list of design principles.

Please email any comments to the team at fasi-s@farnboroughairport.com
by COP **Friday 31 March 2023**.

Following analysis of the feedback Farnborough Airport will form the final list of design principles for this airspace change proposal.

This list, along with all the engagement material and the feedback we have received will form part of our Stage 1 submission document to the CAA.

This will be submitted to the CAA in April, for the DEFINE gateway in May 2023.

Farnborough Airport would like to thank you for your time today.

If you have any questions regarding this airspace change you can email the team at
fasi-s@farnboroughairport.com

Ahead of the Curve

FARNBOROUGH AIRPORT FASI-S AIRSPACE CHANGE PROPOSAL

ACP-2022-038

APPENDIX D STAKEHOLDER FEEDBACK

VERSION 1.0

Phase 1 Feedback

Pages 3-175

Name - [REDACTED] Organisation/Representing - British Gliding Association.

Attended Workshop (online or in-person) Yes

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 				X			<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future				X			
	Workshop 3	Must enhance safety performance by reducing risks from the operation				X			
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change				X			
	Workshop 3	Must be safe for all airspace users				X			
	Workshop 3	Maintain or enhance safety performance for all airspace users				X			

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change				X			
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.				x			
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated				x			
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety				x			See added DP
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels				x			

	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.				X				
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.				X				
	Workshop 2	Avoid overflight of AONBs and National Parks				X				
	Workshop 2	Avoid overflight of rural areas with low ambient noise				X				
	Workshop 3	Avoid populations being newly overflown				X				
	Workshop 3	Should be an overall noise benefit				X				
	Workshop 3	Disperse/share the noise				X				
	Workshop 3	Should provide predictable respite				X				
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)				X				
	Workshop 3	Steeper approaches and steeper climbs		X						
	Workshop 3	Reduce the number of people affected by noise				X				
	Workshop 3	Share the noise but minimise the impacts				X				

	Workshop 3	Reduce the area of overflight of AONBs/National Parks			x				
	Workshop 3	Overfly parks/open spaces when it's dark			x				
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			x				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.			x				
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		x					
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served			x				
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities			x				
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change			x				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology										
	Farnborough Airport	Must meet forecast demand for Farnborough Airport		See note						'justified forecast'
	Workshop 1,2	Must enable a reduction in the total volume of CAS		x						
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)		x						
	Workshop 1	Must enable a reduction in workload per flight		x						
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		x						
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.				x				
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.				x				
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS				x				
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)		x						
	Workshop 3	Consider use of different airspace classifications		x						
	Workshop 3	Consider flexible use of airspace		x						
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities		x						
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.				x				

	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields			x				
Any other design principles we should consider?									
	Minimum impact to GA operations								
	Maintain safe operations in and around the proposed airspace design								
	Proper analysis of overall airspace safety changes, ie based on modelling and evidence rather than purely subjective opinion								
	Expectation that data used, particularly forecasts, will be verifiable including details of all assumptions								
	Proper validation of forecast traffic levels								

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.	

Name. [REDACTED] Organisation/Representing **British Microlight Aircraft Association/Hampshire Microlight Flying Club**

Attended Workshop (online or in-person) Yes

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 	x						<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p> <p>Most preferred option with the addition of supporting information to enable specific evaluation. Also support additional information a, b and c. Not sure how d would/could be measured</p>
	Workshop 2	<p>Must remain as safe as it is today, accounting for changing traffic numbers in the future</p>				x			Any design must be relevant to traffic numbers up to the existing cap – doesn't need to be respecified here
	Workshop 3	<p>Must enhance safety performance by reducing risks from the operation</p>							If adopted, requires a metric to measure this aspect
	Workshop 3	<p>Must be as safe or safer than today for all airspace users that are affected by the airspace change</p>							Duplicated – see comment below against Workshop 4 proposal
	Workshop 3	<p>Must be safe for all airspace users</p>			x				Too general without a definition of 'safe'

	Workshop 3	Maintain or enhance safety performance for all airspace users			x					Prefer proposal below, more specific in nature
	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change			x					Preferred to the option above as it does specify CAT and GA – still need the safety metric
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered		Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy										
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.			x					Seems we don't have any option but to include this one? Therefore should be a 'Must'
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated						x		This should be picked up in individual design principles in Noise and Environment sections
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety		x						Would say this is a 'Must'.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered		Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Noise										
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels								Through improving vertical profiles, a lot of the other suggestions below are also addressed (minimisation of noise, overall noise benefit etc)
	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough’s arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.								Agree specifically with a and b, in combination with the comment above (improved vertical profiles).
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough’s flight paths.								Limits to using existing routings and overflying same populations – limits options and conflicts with proposed principle above *
	Workshop 2	Avoid overflight of AONBs and National Parks								Nice to have. Precede by ‘Where possible’, but not ‘Must’ or ‘Should’
	Workshop 2	Avoid overflight of rural areas with low ambient noise								Nice to have. Precede by ‘Where possible’, but not ‘Must’ or ‘Should’
	Workshop 3	Avoid populations being newly overflown								See comment above *

Workshop 3	Should be an overall noise benefit			x				Too woolly
Workshop 3	Disperse/share the noise		x					Better articulated in first two proposals from Workshop 1 above
Workshop 3	Should provide predictable respite			x				Nice to have. Precede by 'Where possible', but not 'Must' or 'Should'
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)				x			By definition this is not predictable, and would also be complex in operation
Workshop 3	Steeper approaches and steeper climbs	x						
Workshop 3	Reduce the number of people affected by noise			x				Through implementation of 'Steeper approaches and steeper climbs' this is a natural outcome
Workshop 3	Share the noise but minimise the impacts		x					Through implementation of 'Steeper approaches and steeper climbs' this is partly addressed by minimisation of impacts
Workshop 3	Reduce the area of overflight of AONBs/National Parks			x				Nice to have. Precede by 'Where possible', but not 'Must' or 'Should'
Workshop 3	Overfly parks/open spaces when it's dark			x				
Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			x				
Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree	Disagree	Strongly Disagree	Should not	Further Comments

					nor Disagree			be considered	(e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		x					
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent	x						
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served		x					
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities			x				
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change			x				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport	x						
	Workshop 1,2	Must enable a reduction in the total volume of CAS	x						Essential requirement, however should not reduce existing bases of CAS even if releasing

									CAS elsewhere to contribute to an overall volume reduction
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority over simplification)	x						
	Workshop 1	Must enable a reduction in workload per flight		x					This also relates to workload in GA flight – should be picked up in operating procedures
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		x					Similar to above for GA – pick up in operating procedures
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	x						Poorer performing aircraft should be dealt with using operational exceptions, not catch all CAS
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.			x				
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS		x					
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)	x						
	Workshop 3	Consider use of different airspace classifications	x						
	Workshop 3	Consider flexible use of airspace	x						
	Workshop 3,4	Should capitalise on Farnborough airport’s aircraft performance capabilities	x						
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	x						Poorer performing aircraft should be dealt with using

									operational exceptions, not catch all CAS
	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough ‘clutch’ airfields			x				
Any other design principles we should consider?									

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes pace	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough’s control. NATS & the CAA have decided not to pursue a higher TA.

Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 	X						<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future	X						
	Workshop 3	Must enhance safety performance by reducing risks from the operation	X						
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change	X						
	Workshop 3	Must be safe for all airspace users	X						
	Workshop 3	Maintain or enhance safety performance for all airspace users	X						

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change	X						
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.		X					
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated			X				
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels	X						Change Must to Should

Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.		X					
Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.		X					
Workshop 2	Avoid overflight of AONBs and National Parks			X				
Workshop 2	Avoid overflight of rural areas with low ambient noise			X				
Workshop 3	Avoid populations being newly overflown				X			
Workshop 3	Should be an overall noise benefit		X					
Workshop 3	Disperse/share the noise		X					
Workshop 3	Should provide predictable respite		X					
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)			X				
Workshop 3	Steeper approaches and steeper climbs			X				
Workshop 3	Reduce the number of people affected by noise			X				
Workshop 3	Share the noise but minimise the impacts		X					

	Workshop 3	Reduce the area of overflight of AONBs/National Parks						X	
	Workshop 3	Overfly parks/open spaces when it's dark						X	
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			X				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		X					
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		X					
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served			X				
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities			X				Should instead of must
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change			X				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology									
Farnborough Airport	Must meet forecast demand for Farnborough Airport		X						Change must to should
Workshop 1,2	Must enable a reduction in the total volume of CAS		X						Change Must to Aim to
Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)	X							
Workshop 1	Must enable a reduction in workload per flight		X						Change Must to Should
Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		X						
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	X							
Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.			X					
Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS		X

Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels			X				Due to the proximity of near neighbouring airports, the

									London TMA solution needs to demonstrate the optimal collaborative AMS benefits overall, which is being led by ACOG.
	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.		X					
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflowed by Farnborough's flight paths.				X			
	Workshop 2	Avoid overflight of AONBs and National Parks		X					This principle should be "wherever possible" taking account of CAP1616 policy metrics
	Workshop 2	Avoid overflight of rural areas with low ambient noise						X	
	Workshop 3	Avoid populations being newly overflowed		X					
	Workshop 3	Should be an overall noise benefit		X					
	Workshop 3	Disperse/share the noise				X			
	Workshop 3	Should provide predictable respite				X			

	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)						X	IFP procedures are designed in accordance with CAP778 and need to operate safely in all conditions both locally and where there are interactions with adjacent airfields procedures.
	Workshop 3	Steeper approaches and steeper climbs			X				Due to the proximity of near neighbouring airports, the London TMA solution needs to demonstrate the optimal collaborative AMS benefits overall, which is being led by ACOG.
	Workshop 3	Reduce the number of people affected by noise			X				
	Workshop 3	Share the noise but minimise the impacts			X				
	Workshop 3	Reduce the area of overflight of AONBs/National Parks		X					This principle should be “wherever possible” taking account of CAP1616 policy metrics
	Workshop 3	Overfly parks/open spaces when it's dark					x		There is no clear definition of darkness - considering ambient light, local and UTC timings which would degrade the over-riding design principle proposed for safety.
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.		X					Due to the proximity of near neighbouring airports, the London TMA solution needs

										to demonstrate the optimal collaborative AMS benefits overall, which is being led by ACOG.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Environment										
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		X						Due to the proximity of near neighbouring airports, the London TMA solution needs to demonstrate the optimal collaborative AMS benefits overall, which is being led by ACOG.
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		X						Due to the proximity of near neighbouring airports, the London TMA solution needs to demonstrate the optimal collaborative AMS benefits overall, which is being led by ACOG.

Any other design principles we should consider?									
1	It’s important that any of the design principles are not in the first instance given priority over others, and also it would be good to know that the issues of noise and the vocal protesters are not going to have an effect on the principle of the minimum amount of required CAS.								
2	We were informed that the ACP is being implemented so that Farnborough traffic can be integrated with the arrivals and departures from other airports. Are there any other specific reasons for the ACP?

Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.	

Name... [REDACTED] Organisation/Representing....MoD.....

Attended Workshop (online or in-person) No

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 	x						<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future						x	
	Workshop 3	Must enhance safety performance by reducing risks from the operation						x	
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change						x	
	Workshop 3	Must be safe for all airspace users						x	
	Workshop 3	Maintain or enhance safety performance for all airspace users			x				

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change						x	
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.		x					
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated			x				
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety		x					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels			x				

Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.				X				
Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.				X				
Workshop 2	Avoid overflight of AONBs and National Parks				X				
Workshop 2	Avoid overflight of rural areas with low ambient noise				X				
Workshop 3	Avoid populations being newly overflown				X				
Workshop 3	Should be an overall noise benefit				X				
Workshop 3	Disperse/share the noise				X				
Workshop 3	Should provide predictable respite				X				
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)				X				
Workshop 3	Steeper approaches and steeper climbs				X				
Workshop 3	Reduce the number of people affected by noise				X				
Workshop 3	Share the noise but minimise the impacts				X				

	Workshop 3	Reduce the area of overflight of AONBs/National Parks			x				
	Workshop 3	Overfly parks/open spaces when it's dark			x				
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			x				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		x					
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		x					
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served						x	
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities			x				
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change		x					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology									
Farnborough Airport	Must meet forecast demand for Farnborough Airport			x					
Workshop 1,2	Must enable a reduction in the total volume of CAS				x				
Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)			x					
Workshop 1	Must enable a reduction in workload per flight				x				
Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC			x					
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.				x				
Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.				x				
Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS				x				
Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)				x				
Workshop 3	Consider use of different airspace classifications			x					
Workshop 3	Consider flexible use of airspace	x							
Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities			x					
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.				x				

	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields			x				
Any other design principles we should consider?									
	Minimise impact on other airspace users – can be by minimising CAS requirements (cognisant of containment policy, you should only request what is required), different classifications of airspace, minimising activation times/planning for future dynamic airspace activation, enabling access for other airspace users. It may not be appropriate to reduce CAS if the new routes require the same volume for containment.

Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 					X		<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p> <p>Too Verbose</p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future					X		Infers you cannot improve safety
	Workshop 3	Must enhance safety performance by reducing risks from the operation					X		
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change					X		Too verbose
	Workshop 3	Must be safe for all airspace users			X				
	Workshop 3	Maintain or enhance safety performance for all airspace users		X					

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change		x					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.	x						Standard wording
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated						x	Covered by ANG 2017
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety		x					Covered in CAP1616
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels				x			Real life is not representative of the published routes. Should reflect reduced impact of flight.

	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.						x	Again should be about reducing impact of flight profiles. A and B are design decisions rather than principles. DP's with sub sections are suboptimal and should be spilt.
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.						x	Local stakeholders to determine
	Workshop 2	Avoid overflight of AONBs and National Parks						x	Local stakeholders to determine and covered by ANG 2017
	Workshop 2	Avoid overflight of rural areas with low ambient noise						x	Local stakeholders to determine
	Workshop 3	Avoid populations being newly overflown						x	Local stakeholders to determine
	Workshop 3	Should be an overall noise benefit						x	In accordance with CAP1616a
	Workshop 3	Disperse/share the noise						x	Local stakeholders to determine
	Workshop 3	Should provide predictable respite						x	Local stakeholders to determine
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)						x	
	Workshop 3	Steeper approaches and steeper climbs						x	
	Workshop 3	Reduce the number of people affected by noise						x	Local stakeholders to determine
	Workshop 3	Share the noise but minimise the impacts						x	Local stakeholders to determine

	Workshop 3	Reduce the area of overflight of AONBs/National Parks			x				Local stakeholders to determine and covered by ANG2017
	Workshop 3	Overfly parks/open spaces when it's dark						x	
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			x				Cannot be determined within this ACP alone.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		x					Should not specify how this could be achieved.
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent			x				Better split into two DP's
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served						x	
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities		x					
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change						x	Covered by line above
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport		x					
	Workshop 1,2	Must enable a reduction in the total volume of CAS				x			Volume of CAS not the only measurable impact on airspace users
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)			x				
	Workshop 1	Must enable a reduction in workload per flight						x	Whose workload?
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC	x						Could be split into two parts.
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.		x					Agree with intent but not wording. Designed to highest possible PBN standard.
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.						x	
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS						x	
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)						x	Local stakeholders to determine and Covered in CAP1616
	Workshop 3	Consider use of different airspace classifications						x	Local stakeholders to determine and Covered in CAP1616
	Workshop 3	Consider flexible use of airspace						x	
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities						x	How? To achieve what?
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.						x	Covered 7 lines above

	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields							x	
Any other design principles we should consider?										
	Design Principles should be able to be evaluated on a sliding scale (minimise, maximise, optimise) in order to allow for relative comparison at the DPE stage.

	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.						X	"CAP1711 does not recognise non-radio traffic. This is incompatible with hang gliding and paragliding". By way of explanation: The only GA reference in CAP1711 is for a GA aircraft transiting between two small airfields and it is assumed that mandatory radio areas/mandatory transponder areas will be established to allow this to happen. The description of the operation in CAP1711 is totally unlike any hang gliding or paragliding operation and to make this work we would all need transponders/radios.
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated			X				

	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety	X

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 		X					<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future		X					
	Workshop 3	Must enhance safety performance by reducing risks from the operation		X					
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change		X					
	Workshop 3	Must be safe for all airspace users		X					
	Workshop 3	Maintain or enhance safety performance for all airspace users		X					

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.		X					
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated		X					
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels		X					

Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.		X					
Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.		X					
Workshop 2	Avoid overflight of AONBs and National Parks		X					
Workshop 2	Avoid overflight of rural areas with low ambient noise		X					
Workshop 3	Avoid populations being newly overflown		X					
Workshop 3	Should be an overall noise benefit		X					
Workshop 3	Disperse/share the noise		X					
Workshop 3	Should provide predictable respite		X					
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)		X					
Workshop 3	Steeper approaches and steeper climbs		X					
Workshop 3	Reduce the number of people affected by noise		X					
Workshop 3	Share the noise but minimise the impacts		X					

	Workshop 3	Reduce the area of overflight of AONBs/National Parks		X					
	Workshop 3	Overfly parks/open spaces when it's dark		X					
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		X					
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		X					
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served		X					
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities		X					
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')

Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport		X					
	Workshop 1,2	Must enable a reduction in the total volume of CAS		X					
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)		X					
	Workshop 1	Must enable a reduction in workload per flight		X					
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		X					
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.		X					
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.		X					
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS		X					
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)		X					
	Workshop 3	Consider use of different airspace classifications		X					
	Workshop 3	Consider flexible use of airspace		X					
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities		X					
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.		X					

	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields		X					
Any other design principles we should consider?									
**	Farnborough's design should aim to remove dependencies with Southampton ATC in order that the two airports can operate with the minimum of interactions. The arrival transitions and departure procedures shall be deconflicted from, and integrate with, the en-route network and Southampton Airport.

Name..... [REDACTED] Airspace Officer..... Organisation/Representing.....Southdown Gliding Club Ltd.....

Attended Workshop (online or in-person) Yes/No (also attending online; [REDACTED])

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 	✓						Difficult to know what the "life" of an airspace change is, but according to agreed maximum capacity traffic levels, the airspace has to remain fit-for-purpose until either demand or mitigation through technology, can reduce the risk.
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future	✓						See above
	Workshop 3	Must enhance safety performance by reducing risks from the operation	✓						Seems an obvious objective.
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change	✓						This must include the consequential impact on Class G users in the vicinity of Farnborough's controlled airspace, but also General Aviation users accessing that airspace e.g., Letters of

									Agreement (LoA) with Southdown Gliding Club.
	Workshop 3	Must be safe for all airspace users	✓						
	Workshop 3	Maintain or enhance safety performance for all airspace users	✓						
	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change	✓						See above.
Proposed by	Proposed Principle		Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.	✓						Little point in changing the airspace unless you take "meaningful" benefit from redesign as a consequence of changes taking place (today) at LGW, LHR and SOU. The AMS goes out to 2040, with many objectives reliant on future technology. It is difficult to see how the Farnborough airspace can respond to changes that are 10+ years away, without further ACPs.
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated		✓					

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety	✓						Absolutely and should be returned to Class G if not required due to operational changes.
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels	✓						We recognise that vertical profiles of today's departures and arrivals are based on out-dated aircraft performance data. This has to be addressed with due regard to the envisaged operating fleet circa 2027 or whenever the airspace change will be introduced.
	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: <ul style="list-style-type: none"> a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities. 		✓					Subject to prioritisation requirements, but as much as practicably possible. However, some overflight is inevitable and care needs to be taken in any trade-off with the amount of airspace required to contain any departure and arrival procedures. If you can achieve optimum CDO and CCO, the impact on the local communities should be minimised without requiring

									significant volumes of controlled airspace.
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough’s flight paths.			✓				A trade-off with potential conflict with the frequency of overflight.
	Workshop 2	Avoid overflight of AONBs and National Parks			✓				See above. Again, if CCO and CDO objectives are met, aircraft should be higher and have reduced impact.
	Workshop 2	Avoid overflight of rural areas with low ambient noise			✓				
	Workshop 3	Avoid populations being newly overflown			✓				
	Workshop 3	Should be an overall noise benefit		✓					See above.
	Workshop 3	Disperse/share the noise							See above.
	Workshop 3	Should provide predictable respite			✓				If feasible and practicable.
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)		✓					Enhanced profiles to be encouraged.
	Workshop 3	Steeper approaches and steeper climbs	✓						Difficult to see how the Farnborough approach path gradient can be increased – already 3.5°. Arrivals and Transition gradients should be dictated by modern aircraft performance without making any procedure unduly difficult for flight crews to manage. Yes, to steeper climbs, but without stop altitudes and preferably to a FL.

	Workshop 3	Reduce the number of people affected by noise			✓				Trade-off territory.
	Workshop 3	Share the noise but minimise the impacts			✓				See above.
	Workshop 3	Reduce the area of overflight of AONBs/National Parks			✓				See above.
	Workshop 3	Overfly parks/open spaces when it's dark			✓				Provided it doesn't introduce a proliferation of procedures requiring more airspace. The airspace design could be adapted for flexible use, but we would like to see workable procedures, before agreeing to this.
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			✓				Not sure how you achieve this without centralising the airspace design below 7,000ft for all the FASI(S) airports.
Proposed by		Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	<p>Must reduce CO₂ emissions through flight path design which:</p> <ul style="list-style-type: none"> a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths. 	✓						But also avoid stop altitudes and level-off in descent and climb. The main gain for Farnborough must be deconfliction of departures and arrivals with LGW, LHR and SOU. But how feasible is that with the current TA? We can all agree to Design Principles, but how realistic and realisable

									are they in the final airspace design implementation?
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent	✓						See above.
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g., best equipped = best served							ANSPs have had limited success with Best Equipped Best Served, despite significant investment by operators, but a noble principle nevertheless, provided it doesn't require more airspace.
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities		✓					
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change		✓					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport		✓					A given.
	Workshop 1,2	Must enable a reduction in the total volume of CAS	✓						We are not anti-CAS (well, maybe we are), but any airspace volume has to be fully justified and be no more than the minimum required for the safe operation, without having an adverse effect on air traffic movements outside of CAS.

	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)	✓						We strongly agree.
	Workshop 1	Must enable a reduction in workload per flight							Linked to safety of the overall operation and capacity for managing LoAs such as that enjoyed by the Southdown Gliding Club. If the new airspace means that our CAS transits can no longer be accommodated, the change will have had a direct impact on our gliding operation and business.
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC	✓						Predictability and repeatability are seen as good for capacity, except when traffic levels are low. However, we recognise that there will likely be opportunities for tactical routings for flight efficiency purposes, provided it doesn't become a hazard in Class G airspace.
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	✓						A case of Best Equipped Best Served again. Having a minimum PBN nav spec for operators to use Farnborough would help e.g., Advanced RNP.
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.		✓					Why not Advanced RNP with RNP 0.3 lateral track

									accuracy? RF should be used judiciously (e.g., first turns). The design should reflect the common standards and capabilities in service at the time of airspace change introduction. Don't design an airspace for the 2020 aircraft, but the 2027 aircraft, else the airspace will become dated very quickly.
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS	✓						See above. We would caution against use of RNP AR unless of particular benefit (as was the case at another airport contemplating IPA). Outside of the FAF, Advanced RNP does most of what RNP AR does with conventional obstacle protection surfaces benefitting from 0.3 lateral accuracy.
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)	✓						Should be a given if the climb and descent profiles are achieved. However, this will only be realised if the route interactions can be managed and CCO/CDO taken to/from a FL.
	Workshop 3	Consider use of different airspace classifications	✓						We have seen that CTA-8 (Class E+TMZ) is much easier for glider pilots to manage and

									negotiate than crossing CTA-7. So a big yes.
	Workshop 3	Consider flexible use of airspace		✓					Not if it is at the detriment of the size of CAS. We don't use airspace after dark, but switching airspace off and on is something that would have to be carefully considered.
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities	✓						With probably the Best Equipped fleets flying, yes. But make it an airport requirement to leverage these design principles and offer all operators a Best Served service level.
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	✓						See previous comments.
	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields	✓						The airspace change has to fit into the overall AMS objective, otherwise why invest in something offering little or no benefit.
Any other design principles we should consider?									
	On the question of airspace complexity, we understand that Farnborough used to be a "CAT C" aerodrome for most operators. With simplification, the new airspace design should aim to reduce that requirement and thereby make it operationally, an easier and safer airport. This situation may have changed, but the principle remains valid.								
	Consideration for the temporary airspace arrangements that are introduced for the Farnborough Air Show. Although for a few weeks every two years, the impact on General Aviation is quite significant. With a new airspace, how will the Air Show be accommodated?								
	The principles of CAP 1378 PBN Departure and Arrival Mitigations, should be considered.								

	Use of PBN Route Spacing and CAS Containment in the latest (Edition 2) of CAP 1385, should be considered.	

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes pace	This is not a design principle as it is not relevant to airspace design	None.
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	None.
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	None.
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	EC interoperability is key and whilst Flarm is not an aviation standard, it is installed on practically all gliders and gliding related powered aircraft. Technology evolution will be key and how does a fixed airspace adapt and become optimised for future technology initiatives? Another airspace change?
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.	Whereas the Southdown Gliding Club airspace team came away from the two workshops we attended, with hope that the FASI (S) change will deliver benefits for our gliding operations in and around Farnborough, the question still remains as to whether the Design Principles outlined are realisable. We can all agree on improved profiles, CDO and CCO, but if strategic deconfliction of routes is to be successfully delivered, how will that be done

			<p>with TA at 6,000ft? Having Design Principles is one thing, but that will only be hampered if the “Lid of TA”, prevents SIDs to FL and requires airspace for step climbs and descents. Therefore, the Southdown Gliding Club fully supports the direction being taken through these workshops, but believe that what you can practicably achieve may not be much different from today’s airspace structure. It is understandable that NATS and CAA do not wish to entertain TA change as such a project would likely be expensive. But if the UK Government truly wishes to see Airspace Modernisation, National Infrastructure Funding should be made available and TA raised for the benefit of both Farnborough, LHR and LGW and all of the other FASI S+N airports. This comment may be outside of Stage 1 Design Principles of CAP 1616 for Farnborough, but our confidence in the airport’s ability to introduce meaningful and tangible improvements is not high. This is not a criticism of the Farnborough Airport FASI (S) Team, but a reflection on the challenges that your airspace designers will likely be confronted with. Please pass this comment onto ACOG, NATS, CAA and especially to the UK Government. It applies to all AMS related airspace changes, which ironically enough all seek to introduce the same Design Principles – and why wouldn’t they.</p>

Name..... Organisation/Representing London Stansted Airport

Attended Workshop (online or in-person) Yes/No

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 			X				<i>Point C is related to demand and capacity not safety.</i>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future	X						
	Workshop 3	Must enhance safety performance by reducing risks from the operation					X		Implies the current operation is unsafe. May be unachievable.
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change				X			
	Workshop 3	Must be safe for all airspace users	X						
	Workshop 3	Maintain or enhance safety performance for all airspace users		X					

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change				X			Excludes the military
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.	X						
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated				X			Singles out on specific policy. The AMS is the core CAA requirement.
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety				X			Not needed. Already a requirement within the AMS.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels				X			May not be achievable within the busy TMA. Noise and

									fuel burn can be traded off within the terms of the ANG. If noise is a "must" fuel burn has to be as well. Because of this trade off, both should be a "should".
	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.					X		Too complex and difficult to achieve. One aim may contradict another. What happens if no option can achieve all 4 ?
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflowed by Farnborough's flight paths.				X			Does not create a distribution, just more of the same.
	Workshop 2	Avoid overflight of AONBs and National Parks			X				Needs an altitude qualification if used. E.g. below 4,000ft
	Workshop 2	Avoid overflight of rural areas with low ambient noise				X			Difficult to implement when undertaking the noise modelling in Stage 3 and looking at the cost benefit of the change. Contradicts the AMS/ANG.
	Workshop 3	Avoid populations being newly overflowed				X			

	Workshop 3	Should be an overall noise benefit	X						
	Workshop 3	Disperse/share the noise		X					
	Workshop 3	Should provide predictable respite		X					
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)				X			Not needed. Aircraft will not be vertically constrained within a SID unless its for safety reasons.
	Workshop 3	Steeper approaches and steeper climbs		X					
	Workshop 3	Reduce the number of people affected by noise		X					
	Workshop 3	Share the noise but minimise the impacts		X					
	Workshop 3	Reduce the area of overflight of AONBs/National Parks			X				
	Workshop 3	Overfly parks/open spaces when it's dark					X		Impossible to implement given the shifting daylight hours in UK
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.			X				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or			X				See above. This DP should be a "should" not a "must"

		b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.							
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent				X			The crowded LTMA may not be able to facilitate this for any airport.
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served		X					
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities	X						
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport		X					
	Workshop 1,2	Must enable a reduction in the total volume of CAS				X			There should be a trade off. CAS is there for safety. Calling this a "must" may erode safety margins.
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)			X				
	Workshop 1	Must enable a reduction in workload per flight				X			Implementation related, not a product of the design

Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		X					
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.					X		The difference between RNAV1 and RNP1 in terms of aircraft performance is negligible. May reduce flexibility.
Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.					X		May result in less flexibility
Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS		X					
Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)					X		
Workshop 3	Consider use of different airspace classifications				X			
Workshop 3	Consider flexible use of airspace		X					
Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities		X					
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.					X		
Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields					X		
Any other design principles we should consider?

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 	x						<p><i>Assessment required of impact of proposed airspace design on surrounding airspace users, including possible mitigations to effect of 'funnelling' non-CAS users into the same areas of Class G airspace (such as more availability for zone transits, extensions or modifications to LFAs etc)</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future			x				
	Workshop 3	Must enhance safety performance by reducing risks from the operation				x			
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change	x						
	Workshop 3	Must be safe for all airspace users							
	Workshop 3	Maintain or enhance safety performance for all airspace users		x					

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change	x							This DP doesn't mention military users on FBO's doorstep
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Policy										
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.	x							
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated			x					
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety	x							
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Noise										
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels								

	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.								
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.					X			
	Workshop 2	Avoid overflight of AONBs and National Parks				X				
	Workshop 2	Avoid overflight of rural areas with low ambient noise				X				
	Workshop 3	Avoid populations being newly overflown					X			
	Workshop 3	Should be an overall noise benefit			X					
	Workshop 3	Disperse/share the noise			X					
	Workshop 3	Should provide predictable respite			X					
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)						X		
	Workshop 3	Steeper approaches and steeper climbs							X	
	Workshop 3	Reduce the number of people affected by noise			X					
	Workshop 3	Share the noise but minimise the impacts	X							
	Workshop 3	Reduce the area of overflight of AONBs/National Parks				X				

	Workshop 3	Overfly parks/open spaces when it's dark			x				
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.		x					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.						x	This does not consider the CO ₂ impact on those flights OTHER THAN into Farn (such as increased emissions from aircraft routing around the airspace).
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent		x					
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served					x		
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities		x					
	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change	x						
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Airspace and Aircraft Capabilities/Technology									

Farnborough Airport	Must meet forecast demand for Farnborough Airport	x						
Workshop 1,2	Must enable a reduction in the total volume of CAS	x						Should endeavour to.....
Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)		x					
Workshop 1	Must enable a reduction in workload per flight						x	
Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC		x					
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.		x					
Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.			x				
Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS						x	What about those unable or not equipped?
Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)		x					
Workshop 3	Consider use of different airspace classifications		x					
Workshop 3	Consider flexible use of airspace	x						
Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities						x	What about Blackbushe? Odiham? Fair Oaks?
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.						x	
Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields		x					

Any other design principles we should consider?	

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflowed	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.

	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change	X						
	Workshop 3	Must be safe for all airspace users	X						Should be a standard priority
	Workshop 3	Maintain or enhance safety performance for all airspace users	X						Modernisation schemes should endeavour to improve safety

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change	X							Should be a standard priority-safety conditions should not worsen so a baseline should be established and then monitored after completion of scheme
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Policy										
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.			X					
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated	X							
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety	X							Efforts to modernise the current Airport should not reduce current safety standards- otherwise improvements become counterproductive.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree	Disagree	Strongly Disagree	Should not be considered	Further Comments	

					nor Disagree				(e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels			X				
	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.		X					Frequency of overflight for the same populations should be reduced where possible, to constitute improvements.
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflown by Farnborough's flight paths.				X			Once routes are drafted, proceeding plans should consider enabling an equal proportion of people to be overflown irrespective of current impact. Overflown communities should be equally affected where possible, or mitigated where otherwise not possible.
	Workshop 2	Avoid overflight of AONBs and National Parks	X						Areas of interest should not be negatively impacted by air pollution from air transport. Nor should any air travel

									impede on the visual quality of preserved areas.
Workshop 2	Avoid overflight of rural areas with low ambient noise				X				Areas of interest are designated under planning as mentioned above (AONB, Natural Parks). There are limitations to land outside the remit of development and allocations.
Workshop 3	Avoid populations being newly overflowed						X		Air improvements should not make conditions for current overflowed populations significantly worse. Mitigation should ensure flight paths.
Workshop 3	Should be an overall noise benefit			X					Respite (including sound) should be provided for all overflowed populations.
Workshop 3	Disperse/share the noise	X							Noise is a key concern for residents regarding changes to air transport.
Workshop 3	Should provide predictable respite	X							Where populations are overflowed, including new populations, respite should be factored in.
Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g., Temperature Inversions)			X					If 'enhanced profiles' refers to increasing mitigation methods i.e., flexible, responsive routes- these should be supported

Workshop 3	Steeper approaches and steeper climbs			X					Can it be confirmed that these measures limit noise and visual impact of air travel?
Workshop 3	Reduce the number of people affected by noise					X			Current conditions should either improve i.e., populations currently overflowed should see reduced noise/impacts through further distribution of flight paths.
Workshop 3	Share the noise but minimise the impacts		X						
Workshop 3	Reduce the area of overflight of AONBs/National Parks		X						Should not be to the detriment of overflowed residents currently experiencing significant noise/impact from air travel
Workshop 3	Overfly parks/open spaces when it's dark	X							This should be applied to rural areas with low ambient noise.
Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.	X							
Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Environment									
Workshop 1	Must reduce CO ₂ emissions through flight path design which:		X						

		a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.							
Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent	X							If to improve carbon emissions
Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served				X				Dependant on 'optimised' routes and impact in general. Optimised routes should be defined e.g., shorter routes, less impact, less noise etc.
Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities	X							If proposed modernisation of the airport increases contributions, has offsetting/insetting been considered? Particularly in relation to neighbouring Heathrow Airport.
Workshop 3	Reduce CO ₂ emissions as a result of the airspace change	X							Should seek to as part of modernisation
Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')	
Airspace and Aircraft Capabilities/Technology									
Farnborough Airport	Must meet forecast demand for Farnborough Airport		X						
Workshop 1,2	Must enable a reduction in the total volume of CAS			X					
Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)			X					
Workshop 1	Must enable a reduction in workload per flight			X					

Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC			X				
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.			X				
Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.			X				
Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS			X				
Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)			X				
Workshop 3	Consider use of different airspace classifications			X				
Workshop 3	Consider flexible use of airspace		X					
Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities	X						Farnborough Airport is considered an asset, and although not within the Borough is meeting a need, which should be made best use of.
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.			X				
Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields			X				
Any other design principles we should consider?								
Is visual amenity being considered? Possibly through a Residential Visual Amenity Assessment (RVAA)? Noted that planning permission is only required from Rushmoor BC if there is an increase in numbers of aircraft movements above the existing cap.								

	Will 'new' routes consider mitigating the effects on Air Quality Management Areas (AQMAs)?	

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	Is this not considered 'respite'- as outlined above?
Workshop 3	Compensation for newly overflowed	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.	

Name: [REDACTED] Organisation/Representing: West Sussex County Council (OFFICER ONLY FEEDBACK)

Attended Workshop (online or in-person) Yes

	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Safety									
	Workshop 1	<p>Must be as safe or safer than today for all airspace users*</p> <p><i>*Potentially with additional supporting information, for example</i></p> <ul style="list-style-type: none"> a) <i>Ensure doesn't degrade below a baseline metric</i> b) <i>Ensure no expected increase in controlled airspace infringements</i> c) <i>Ensure no increase in traffic density patterns outside CAS</i> d) <i>Ensure no increased overflight of aerodrome outside CAS below x000ft</i> 		X					<p><i>Please provide suggestions. We would need to establish the safety baseline in Stage 2, ahead of the Design Principle Evaluation</i></p>
	Workshop 2	Must remain as safe as it is today, accounting for changing traffic numbers in the future		X					
	Workshop 3	Must enhance safety performance by reducing risks from the operation		X					
	Workshop 3	Must be as safe or safer than today for all airspace users that are affected by the airspace change		X					
	Workshop 3	Must be safe for all airspace users		x					
	Workshop 3	Maintain or enhance safety performance for all airspace users		X					

	Workshop 4	Be as safe or safer than today for both commercial air transport and general aviation users that are affected by the airspace change		X					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Policy									
	CAA	Subject to the overriding design principle of maintaining a high standard of safety, the highest priority principle of this airspace change that cannot be discounted is that it accords with the CAA's published Airspace Modernisation Strategy (CAP 1711) and any current or future plans associated with it.		X					
	Workshop 2	Make reference to Section 62 duty in the Environment Act 1995: Duty of certain bodies and persons to have regard to the purposes for which National Parks are designated			X				
	Workshop 3	The amount of controlled airspace is the minimum required to maintain a high standard of air safety			X				
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Noise									
	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels							WSCC are not able to comment on vertical profiles.

	Workshop 1	Should reduce the frequency of overflight for the same populations where possible by: a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities.		X					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 1	Should minimise the impact of change on communities by minimising the number of people newly overflowed by Farnborough's flight paths.		x					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 2	Avoid overflight of AONBs and National Parks		x					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 2	Avoid overflight of rural areas with low ambient noise		x					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Avoid populations being newly overflowed		x					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Should be an overall noise benefit		x					A balanced approach should be taken to seek to minimise

									and manage the adverse impacts of noise
	Workshop 3	Disperse/share the noise		X					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Should provide predictable respite		X					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)							WSCC are not able to comment on enhanced profiles
	Workshop 3	Steeper approaches and steeper climbs							WSCC are not able to comment on profiles.
	Workshop 3	Reduce the number of people affected by noise		X					
	Workshop 3	Share the noise but minimise the impacts			X				A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Reduce the area of overflight of AONBs/National Parks		X					A balanced approach should be taken to seek to minimise and manage the adverse impacts of noise
	Workshop 3	Overfly parks/open spaces when it's dark			X				Given the detrimental impacts to health of communities overflown during the night period, resulting in sleep

									disturbance, directing any aircraft at night to fly over areas of less population may reduce impacts. A balanced approach is required.
	Workshop 4	Should avoid overflying the same communities with multiple routes, including from other airports, below 7000ft.		X					A fair distribution of overflying should be sought.
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Environment									
	Workshop 1	Must reduce CO ₂ emissions through flight path design which: a) improves vertical profiles (see Must Noise DP on improved profiles) and/or b) delivers an overall reduction in flight plannable track miles for Farnborough' arrivals and departure flight paths.		X					Opportunities should be sought to reduce emissions of CO ₂ where possible
	Workshop 1,2,3,4	The airspace design must enable improved Continuous Climb/Continuous Descent							WSSC are not in a position to comment on profiles. Designs should seek to allow aircraft to minimise CO ₂ emissions
	Workshop 2,3	Optimised routes should be made available for use by less polluting aircraft e.g best equipped = best served		X					
	Workshop 3	Must reduce the contribution to climate change from Farnborough's aircraft activities		X					

	Workshop 3	Reduce CO ₂ emissions as a result of the airspace change		x					
	Proposed by	Proposed Principle	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree	Should not be considered	Further Comments (e.g if this suggestion should be a 'must' or a 'should')
Airspace and Aircraft Capabilities/Technology									
	Farnborough Airport	Must meet forecast demand for Farnborough Airport							WSCC are not in a position to comment
	Workshop 1,2	Must enable a reduction in the total volume of CAS							WSCC are not in a position to comment
	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)							WSCC are not in a position to comment
	Workshop 1	Must enable a reduction in workload per flight							WSCC are not in a position to comment
	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC							WSCC are not in a position to comment
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.							WSCC are not in a position to comment
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.							WSCC are not in a position to comment
	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS							WSCC are not in a position to comment
	Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)							WSCC are not in a position to comment

	Workshop 3	Consider use of different airspace classifications							WSCC are not in a position to comment
	Workshop 3	Consider flexible use of airspace							WSCC are not in a position to comment
	Workshop 3,4	Should capitalise on Farnborough airport's aircraft performance capabilities							WSCC are not in a position to comment
	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.							WSCC are not in a position to comment
	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields							WSCC are not in a position to comment
Any other design principles we should consider?									

Additional Comments made during Workshops			
Workshop	Comment	Farnborough Response	Further feedback
Workshop 3	Introduce periods where no flying takes place	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Compensation for newly overflown	This is not a design principle as it is not relevant to airspace design	

Workshop 3	Farnborough Airport should cease operations	This is not a design principle as it is not relevant to airspace design	
Workshop 3	Reference to electronic conspicuity	This is not an airspace design, but an operating procedure which can be investigated at a later stage	
Workshop 3	Should have a higher transition altitude to maximise use of airspace	This is not within Farnborough's control. NATS & the CAA have decided not to pursue a higher TA.

	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.			“				
	Workshop 2,3,4	Designs should be based on RNP1 + RF as a minimum.			“				

Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS				“				
Workshop 3,4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)				“				
Workshop 3	Consider use of different airspace classifications				“				
Workshop 3	Consider flexible use of airspace				“				
Workshop 3,4	Should capitalise on Farnborough airport’s aircraft performance capabilities				“				
Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.				“”				
Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough ‘clutch’ airfields				“				
Any other design principles we should consider?									
	<p>Have Stakeholders had the opportunity to comment upon the Statement of Need; the first step in the CAP 1616 process. If not why not? The S of N should inform the Design Principles. An explanation would be helpful, for example, as to why interdependencies between Farnborough routes and Heathrow and Gatwick operations “<i>result in the volume of Controlled Airspace required to safely contain the routes into and out of Farnborough is relatively large and extends for some miles from the airport</i>”.</p> <p>The CAA’s advice at para 76 of CAP 1678 (the CAA’s current ACP decision Notice) notes that Farnborough’s location relative to other airports means that whilst the airspace is relatively large, multiple routes cannot be established and hence opportunities for respite do not exist. Is it right to say that a lesser volume can will exacerbate this constraint?</p> <p>The 2021 census and Post Codes down to sub district level to be used if reductions in populations overflow underpin the environmental impact assessment.</p>

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Thanks for your time with the slides today. As discussed, our observations on the design principles at this stage are:

1. It was noted that the design principles at one point discounted a specific policy regarding overflying AONB and National Parks but at another point they remained in. I think the position towards these ought to be consistent, and understand the reason for leaving them out if covered by Gov policy.
2. The second point was around what are called "clutch" airfields. I think the policy needs to have a statement that deals with the following two issues:
 - a. Clutch airfields should not be disadvantaged by the new airspace design. It is our view this should apply equally to VFR and IFR traffic, as we felt that the airspace design (in the last instance) has had the effect of disadvantaging local aerodromes, despite everyone's efforts to mitigate this at the implementation stage) I appreciate you can't make policies that it will be specifically improved, but some assurances that:
 - i. available uncontrolled airspace;
 - ii. access to controlled airspace
 - iii. proximity of controlled airspace to aerodrome visual circuitswill not result in a negative impact would be appreciated.
 - b. The statement that the new airspace should accommodate forecast demand for Farnborough, we believe that likewise it should accommodate forecast demand for clutch airfields. We should be invited to provide estimates for growth and to align with the policy of not disadvantaging us, this shouldn't just mean the new airspace shouldn't have a negative impact now, it also shouldn't prevent us from growing in a sustainable manner too. It is likely this airspace takes over a decade or more to deliver, and the airspace needs to anticipate what the needs might be by the time it goes live. This might include new emerging technology which the AMS ought to consider (such as UAV, EVTOL etc).
3. On the principle of quantitatively assessing safety impacts, you mentioned collating a series of data points which can be used to measure the effectiveness of the airspace change once it has been implemented. I think clutch airfields ought to also be invited to provide data points. The recent airspace change demonstrated that the negative impacts on safety outside the controlled airspace, but within the ATZs of neighbouring airfields wasn't properly considered early on, which led to airspace design which results in pilots making less safe manoeuvres in an effort to avoid infringing controlled airspace. I'm not casting blame here, I know that our previous management failed to engage with the previous ACP effectively which undoubtedly contributed to this. However, I think as organisations we ought to learn from our previous experience, and therefore I think it would be worth establishing some data points which we can feed into the ACP process, so that it can be demonstrated that the airspace has either improved, or at least not reduced safety in surrounding uncontrolled airspace. For example, our go-around rate has more than doubled since Feb 2020, this might be an indicator we use. Likewise, we might use other datapoints like MORs, Airprox, Infringements etc.

I hope these items can be considered as you proceed with the AMS and please know you have my full support in delivering it. I have no doubt that the intention of those involved is to deliver airspace that benefits all, but it would be useful to have

the assurances documented now in order to ensure those intentions remain throughout the process, particularly as the length of this project is likely to see some personnel changes during its design and delivery.

Thanks,

Managing Director, Blackbushe Airport Ltd

Subject: EXT: Comments on Airspace Modernisation Airspace Change Proposal

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

As Waverley Borough Council's representative on FACC, I attended the Phase 2 Workshop on 3 March. I found it extremely useful (even though I may not agree with all that was said) so thank you for putting it on and inviting me.

I have the following comments on the papers you distributed. They represent my personal views, not those of Waverley Borough Council.

1. N5 - Avoid overflight of rural areas with low ambient noise. While I understand that this principle may well have to be modified in future stages where all these principles have to be examined in more detail and scrutinised in relation to other design principles, I'd like to put on record that I am disappointed, as someone representing residents living in Waverley, that it has been discarded at this early a stage.
2. In the proposed prioritised list pf design principles, you use the word 'communities' where you say that overflying the same communities are to be avoided. I have no argument with that, but one of the problems local Waverley residents have is, if they happen to live directly underneath a particular flight path, they are subject to a disproportionate degree of nuisance as aircraft, using advanced technology, tend increasingly to fly on exactly the same paths, rather than using the full width of the authorised flightpath. The 'community' affected can therefore be a linear band of no more than metres wide but extending lengthwise for a considerable distance. I hope that future stages of the ACP can recognise this more explicitly and of course modify their proposals accordingly by directing aircraft not to use exactly the same path every time - in order to give these residents some respite.
3. One of the design principles is 'accommodate forecast demand for Farnborough'. I don't dissent from this general principle but feel (as others did) that this implies that the ACP should stick quite rigidly to the existing cap of 50,000 movements per year plus other existing sub-limits. It might be that future design work identifies that reducing this limit brings other benefits such as general noise reduction and so shouldn't be declared out of scope at this early stage.
4. While I recognise that the current PIR and this work are technically quite different, I hope that the CAA will take these early stages of the ACP into account when progressing the PIR - even though they have differing timescales.

Best wishes.

Dear Stakeholder,

Thank you very much to those of you were able to attend our second round of workshops between 1st to the 3rd March 2023 on Design Principles for our new airspace change proposal. Further information on our proposal is available on the CAA Portal [here](#).

In the workshops we presented a summary of the feedback we received from our first phase of engagement and shared a draft set of design principles for our airspace change proposal.

During the workshops, some stakeholders suggested changes to our proposed design principles, some of which we have incorporated in the list, you can see the original version alongside proposed changes in the presentation. We would now welcome your feedback on that list of design principles.

Please let us have your feedback by COP on **Friday 31st March 2023**. We have also provided an updated FAQ document, with some of the questions we have received over the course of our engagement so far.

Following analysis of your feedback, Farnborough Airport will then form the final list of design principles for this airspace proposal. This list, along with all our engagement material and the feedback we have received will form part of our Stage 1 submission documents and be submitted to the CAA in April, for a May 2023 gateway.

Kind Regards,

[REDACTED]

Hi [REDACTED] below are comments from Farnborough Noise Group.

Firstly, I have previously highlighted the fact that growth in aviation is already a problem for the UK and its ability to meet the legal obligations under the Climate Change Act (see below). Increasing the capacity of UK airspace supposes that aircraft are going to stop using hydrocarbon fuel (fossil fuel and SAF) in the next seven years which is clearly ridiculous.

Transport & Environment. CO2 emissions growth by sector against 1991 baseline.

In addition, the Government's Jet Zero policy states that CO2 emissions from aviation cannot increase above 2019 levels. In the past 12 months emissions are already above this so there must be pressure on the aviation sector to reduce flights and capacity, not increase it. This is what countries like France and Netherlands are doing now, not in years to come.

Regarding the documentation sent out, it is clear to see the way that the CAA is trying to position just two choices for the public to consider. This is unreasonable and undemocratic. The involvement of the public at the design principles stage has been repeatedly raised in response to the CAA's current CAP 1616 consultation. The CAA is saying it wants to "double airspace capacity" and "we want to give airspace back" but the only way to do this will be to reduce respite flightpaths and increase the density of flights in concentrated flightpaths using PBN. It is also saying that it will reduce the number of people overflowed and using the argument that there are more people in favour of routing flights over quiet rural areas. Of course there are! There are more people in urban areas saying the flights should be over rural areas than there are people in rural areas saying they should fly over urban areas. This is the mentality of people who throw rubbish out of a car window in the countryside thinking nobody will notice it. There is already legislation designed to protect rural areas from noise pollution that the CAA is ignoring (Air Navigation Guidance 2017) and there is more legislation about to be enacted to further protect rural areas from noise and pollution (National Planning Policy Framework). On top of that, there are more areas in the South East being incorporated into National Parks for the benefit of the millions of people in the South East wanting and needing rural areas for wellbeing and environmental sustainability. You can't have every organisation grabbing bits of space/sky thinking their need is greater than anyone else's. If every organisation takes the CAA's approach (housing, roads, rail, drilling licences, incinerators, etc), there won't be any "rural" left.

The DfT is about to announce restrictions on ultrafine particle pollution and the aviation sector is a major contributor to this. There are now legal challenges being taken out against specific MPs and public bodies for failing to meet the legally binding emissions reductions applied to all government departments. Once MPs start being called to court, it will get interesting. The High Court has repeatedly been on the side of the environment not politicians.

Key points from the presentation and FAQs are:

1. Page 5, Para 2 – CAA views the Farnborough AMS as having been completed. This is incorrect and cannot be assumed.
2. Page 6, Para3 - CAA is saying it intends to give back airspace and it is committed to PBN. The document explains how this will "benefit" people regarding Farnborough aircraft but doesn't explain that there will be a consequential increase in LGW/LGR aircraft in the area as the flightpaths are relocated over new areas. The aim is for 2m movements a year for LGW/LGR by 2030. That's between 3,000 and 6,000 movements a day/night.
3. Page 10 – incorrect as it benchmarks safety from now, not prior to the FAL ACP.
4. Page 13 – The 2014 design of FAL airspace considered AONB/NP and low flying aircraft but said they couldn't be avoided. What will be different in AMS and the application of Air Navigation Guidelines 2017, NPPF and government regulations on noise?
5. Page 14 point b – It is misleading to use the post FAL ACP as the baseline for "no new people overflowed" rather than pre-ACP. The CAA has failed to provide the data and methodology to support the claim in the 2014 consultation.
6. Page 14 point c – The statement misleads as the intention will be to reduce the number of routes into/out of FAL i.e. greater concentration rather than dispersal.
7. Page 14 point d – Aircraft are still noisy down to 7,000ft. This suggest LHR/LGW aircraft will be able to fly lower than they generally do now.
8. Page 18 point c - PBN results in aircraft flying exactly over the same track which is a major issue with relentless noise for people who live under/near them. PBN allows for multiple tracks to be flown to provide respite. Problem with respite is that it means you need to take a lot more airspace. AMS is expecting to reduce CAS..... therefore use more PBN and less respite which is unacceptable.

9. Page 18 – It appears that FAL expects to grow volumes. This is a planning issue rather than an airspace issue. No aviation (including FAL) can increase volumes for the reasons given already.

The AMS design prioritisation in the tables has been skewed by the number of people “voting” as there are more people in towns/cities and fewer in rural areas. That may appear to be “democratic” but it is not a reasonable approach.

Subject: Farnborough Airport - Request for Feedback - Design Principles

Dear Stakeholder,

Thank you very much to those of you were able to attend our second round of workshops between 1st to the 3rd March 2023 on Design Principles for our new airspace change proposal. Further information on our proposal is available on the CAA Portal [here](#).

In the workshops we presented a summary of the feedback we received from our first phase of engagement and shared a draft set of design principles for our airspace change proposal.

During the workshops, some stakeholders suggested changes to our proposed design principles, some of which we have incorporated in the list, you can see the original version alongside proposed changes in the presentation. We would now welcome your feedback on that list of design principles.

Please let us have your feedback by COP on **Friday 31st March 2023**. We have also provided an updated FAQ document, with some of the questions we have received over the course of our engagement so far.

Following analysis of your feedback, Farnborough Airport will then form the final list of design principles for this airspace proposal. This list, along with all our engagement material and the feedback we have received will form part of our Stage 1 submission documents and be submitted to the CAA in April, for a May 2023 gateway.

Kind Regards,

[REDACTED]

Dear [REDACTED]

Thanks again for this opportunity to comment on the updated proposed design principles. My brief comments are as follows.

Principle 1. Compliance with the CAA's AMS is not 'subject to' the maintenance of an appropriately high standard of safety. My understanding is that the establishment and subsequent maintenance of safety standards is addressed by the CAAs' licensing, auditing, and incident reporting procedures.

Principle 3. Could be better to say "*shall not constrain movements to a level below the permitted level of annual movements*".

Point 4. Does point 4a comply with the government's altitude-based priorities? Above 4000 feet a balance is to be struck between noise and GHG emissions?

Principle 6. Experience shows that those who are newly overflown generate most, if not all the current noise complaints. The design principle should therefore avoid, not just minimise, newly overflown populations. Existing populations overflown by aircraft in the transition phase should benefit from the anticipated 'higher quicker' flight profiles.

Kind regards

Hi [REDACTED]

Hope all is well with you. At long last I have looked at the Phase 2 slides and in principal agree with direction the proposal is going in. It is I think important to have continued liaisons with NATS to tie together any changes that may be made to all of Londons airspace.

Good Luck.

Dear [REDACTED]

Please find below, my comments, questions and feedback following the recent consultation meeting. In the interests of both brevity and clarity, I have provided these in point form and trust that they are all clear.

We may provide further input later today.

If there is anything in my feedback that requires clarification, please let me know.

Regards.

[REDACTED]
Chairman, Lasham Gliding Society

Lasham points of feedback:

- Workshop document, Summary of the Statement of Need: bullet point 3 states that the majority of limitations that Farnborough is experiencing is related to Heathrow and Gatwick. Can you clearly state which other limitations are also creating the need for this ACP?
- Policies P1 and P2: High stakeholder priority as attached to the proactive compliance with both policies. While, however, both may already be referenced in other CAA/other documents, we believe that both should be explicit objectives in any Farnborough ACP. This would prevent the proactive measures being lost from any ACP.
- Mandated Design Principle: it is imperative that specific local objectives/requirements are taken into proper account within an ACP. All of the priorities highlighted by Lasham Gliding Society are entirely aligned with AMS objectives. Under no circumstances, should an 'interpretation' of the AMS be used to exclude or diminish a local priority - unless there is a clear and agreed conflict. Under such circumstances, further engagement should take place in order to reconcile points of conflict.
- Environment E1 through to E4: we oppose the idea that airspace design should be based on the principle that it must be able to accommodate all aircraft types, specifically those that are most polluting. This creates the perverse situation where airspace design is enabling poor environmental performance. Indeed, outside the ACP, we think that Farnborough should do

much more to improve its overall environmental footprint through, for example, reducing the number of positioning flights taking place.

- AA1 - we made our point clear in the consultation meeting - airspace design should permit reasonable expectations of aircraft movement. They must not be based on future traffic forecasts that cannot be properly validated. Farnborough's ability to forecast movement numbers has been clearly shown to be not just woeful but actually totally biased. Continuing to use projections without a properly considered rationale fundamentally undermines the ACP process. We suggest that the design should assume no more than 40,000 movements over the next 10+ years.
- Additional Suggestions from Stakeholders - we do not consider the aim of minimising impact on GA and other airspace users to be adequately or specifically addressed by DP1, 2 and 4 at this stage in the process.
- Proposed Design Principle 5 - Dependencies should not be removed if, by doing so, there would be a material detriment to any stakeholder group.
- Accompanying FAQ document - refers to the intention of creating the capacity for efficient growth. In the first consultation meeting, Farnborough clearly stated that this was a requirement introduced by the CAA and was not something that Farnborough had in mind in preparing an ACP. Please clarify this point publicly - assuming that the clear answer given in consultation meeting 1 remains accurate. If it does not, please make that clear in return.

Good afternoon [REDACTED]

MOD supports your list of Design Principles but would have preferred to see inclusion of a DP to minimise impact on other airspace users. I can see from your briefing material that this has been discounted as deemed to be captured within DP1,2 and 4, however it would be appreciated if the intent can be explained explicitly within at least one of those DPs, or reconsider its addition separately.

Kind regards,

Good Morning,

On behalf of NERL I would like to thank you for this additional opportunity to provide feedback on your draft Design Principles.

NERL wondered whether your DPs would be listed in priority order or whether priority status would be allocated later?

As a general comment for DPs 3-8, the format should be “The airspace design should/shall...[DP text] to the greatest/smallest possible extent”

DP1 – could stop after “today” but fine as it is. Regarding the DP evaluation it is worth noting that “as safe as today” as would be to be amber and only “safer than today” would be green. Just a thought.

DP2 – no further comment

DP3 – no further comment. Again, NERL was unsure how this would be assessed at the DP Evaluation.

DP4 – this is actually 5 sub-DPs, and each would need to be evaluated separately. (DP4 C, is in two parts: the first being volume, the other being complexity, and both must be evaluated separately).

DP5 – NERL would suggest a revision to the wording: “The airspace design should minimise dependencies on adjacent units”. The current wording may be too vague and subsequently hard to evaluate.

DP6 – this is also 4 sub-DPs. 4d could be “minimise the overflight of communities by air traffic using more than one airport below 7,000ft, where one of those airports is Farnborough”

DP7 – NERL considers that DP7 is unclear and may be difficult to evaluate. Perhaps this could be incorporated into DP4, i.e. “Using modern fleet capabilities, improve vertical profiles to enable.....” however if the intention was to refer to nav capabilities, that should be the stated instead.

DP8 – this could be a sub-DP of DP5. NERL would suggest a revision to the wording, along the lines of: “The airspace design should accommodate Farnborough Clutch airways traffic to the greatest possible extent”.

Once again, thank you for this opportunity to comment. I hope you find our thoughts helpful.

Kindest regards

Hello [REDACTED]

Your reminder came in just as I was starting to refresh my memory on this!!!

The attachments are helpful, thank you.

One matter of precision; P2 should also include section 85 of the Countryside and Rights of Way Act 2000 as that provides a similar duty of regard to the purposes of designation for AONBs as the Environment Act does for National Parks. Furthermore, the Guidance from DEFRA on the operation of those duties under both acts is clear that 'relevant bodies' [and that includes government ministers] should, para 5, 'note that the duties apply to any decisions or activities an authority may take affecting land in these areas; not just to those that relate to narrowly-defined environmental or 'countryside' issues.'

This AONB is, therefore, concerned that the 'parking' of principles N4 and N14, because they are covered by Air Navigation Guidance 2017, takes those duties out of sight when they should be continuously part of the design process.

It also seems rather strange that N5, avoid overflying of rural areas with low ambient noise, is also set to one side because it 'contradicts Government policy'. What is that policy? We regularly get Parliamentary statements about the importance of the character and nature of the countryside so it seems rather strange the avoiding rural areas with low ambient noise should be against government policy.

I look forward to hearing from you, and I trust those points can be taken on board.

Dear [REDACTED]

The answers to your questions are as follows:

1. Are you able to provide/access this data in a digital drawing format (csv, dwg, kml) so we could plot and understand vertical profiles?

There is no typical flight profile and pilots could be anywhere from 10m above the ground to 300m over the ground at any point in the flight (subject to airspace and could be higher if the conditions allow). The data is available but I would need to do some work to find a way of getting hold of it in a suitable format. I will investigate.

2. Failing that, are you able to provide information on the preferred profiles for such flights (in the absence of airspace constraints)

Paragliders fly cross country by finding thermals to gain as much height as possible before then gliding to the next thermal. When thermalling the profile is very similar to a sailplane but a paraglider turns tighter. On glide the pilot will be descending as they cover distance. The performance of a paraglide is very poor and they only have a glide angle of between 8% and 12% downwards. They will always try to get as high as possible in the thermal subject to airspace limits. Thus the preferred profile is dependant on the weather on any particular day. I attach a klm and IGC file from a flight of mine to give you some indication of the random nature of our flights. The flight was in Wales but gives an indication about the randomness.

[3.](#) Is this based on ADSB data or similar, or is this based on GPS data direct from the pilots/aircraft?

The data has been derived from GPS data downloaded from pilots flight instruments as an "IGC" file. The flight instruments vary according to what the pilots own but the data is presented in the same format for all instruments. This is just a flat text file with GPS information recorded every second of a flight.

With kind regards

[REDACTED]

I thought it would be useful, before you get into the next stages for the airspace design, to share with you and the team a heatmap of Paragliding flights in the area to the west of Farnborough. The data has been compiled on a website <https://flyxc.app/?s=20&l=xc> which picks up flight logs from pilots who submit data to one of the competition leagues <https://www.xcontest.org/world/en/>. This data is not all of the flights as many pilots do not submit flight data to xcontest and does not include Hang Glider flights but those are much lower in numbers (about 5% of the volume of Paraglider flights).

The two screenshots show the tracks of paragliders, with the Skysurfers launch sites being easily identifiable by the intensity of the lines (Old winchester Hill, Wether Down, Butser Hill and Harting being the sites most often flown in Hampshire). Blue lines show individual flights. The airspace is marked on the screenshots and clearly show the pinchpoints around the airspace. A lot of the flights that are squeezed by the Southampton airspace are from Coombe Gibbet up to the North and by the Farnborough airspace. The biggest problem is the floor of the Farnborough airspace above our sites as this limits our operations.

Please let me know if you would like further information or explanation.

With kind regards

EXT: Farnborough design principles stage 1 feedback

Thu 30/03/2023 15:54

To: FASI-S Farnborough Airport <fasi-s@farnboroughairport.com>

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear [REDACTED]

The Southdown Gliding Club appreciates the opportunity to engage with Farnborough Airport in your latest airspace change and would like to offer the following feedback on three points associated with the Design Principles (Stage 1, Step 1b) that you propose to use:

Point 1

According to Sustainable Aviation, in the UK Continuous Descent Operations (CDO) is more commonly known as Continuous Descent Approach (CDA), which typically starts from an altitude of 6,000 feet AMSL and is thus a subset of a CDO. ICAO Doc 9931 has a broader description:

- CDO is enabled by airspace design, procedure design and facilitation by ATC, in which an arriving aircraft descends continuously, to the greatest possible extent, by employing minimum engine thrust, ideally in a low drag configuration, prior to the final approach fix/final approach point (FAF/FAP). An optimum CDO starts from the top-of-descent (TOD) and uses descent profiles that reduce controller-pilot communications and segments of level flight. Furthermore, it provides for a reduction in noise, fuel burn and emissions, while increasing flight stability and the predictability of flight path to both controllers and pilots.

The Southdown Gliding Club fully supports the application of CDO techniques but notes that there are no apparent metrics associated with where Farnborough Airport intends to apply CDOs (start or finish) and what % of arrivals you anticipate will use CDO. Noting that current STARS at Farnborough commence at FL180 (ELDAX) and AT or ABOVE FL110 (KATHY), there is scope to interpret Farnborough Airport's intentions above the current UK CDA definition. Having a Design Principle is admirable, but in terms of showing how your Design Principles intend to be demonstrated in the final airspace operation (especially in Stage 7), further clarification could be provided.

Point 2

The demarcation level of 7,000 feet came up a number of times in the presentation on 01 March 2023 and is a completely arbitrary level. It is applied both in the Government Air Navigation Guidance in their altitude-based environmental priorities i.e., noise versus CO2 and in the responsibility for consultation i.e., Farnborough's responsibility is at and below 7,000 feet and NATS is above. This level has nothing to do with an airspace design or in applying CCO and CDO and possible associated metrics. We feel that Farnborough need to be looking at continuous climb and descent operations through the whole continuum, especially since we know that they would like to take their departure routes to a FL and their STARS today commence some distance out from the airport and well above 7,000 feet. Even though NATS TC provide ATS on the routes above 7,000 feet,

those routes are still published under EGLF in the UK AIP and are technically Farnborough Airport's design.

Point 3

The Southdown Gliding Club supports the Design Principle to remove dependencies, and we can acknowledge the current issue with Southampton ATC. However, Farnborough today have dependencies with other airports e.g., LHR, and of course, we and many other airspace users have Letter of Agreement (LoAs) with the airport. Our view is that as a general Design Principle, Farnborough Airport should be approaching their new airspace design with the objective of removing as many of these dependencies as possible, not just the one with Southampton ATC. A good outcome for the Southdown Gliding Club would be, as a minimum, an airspace design that would simplify or else completely remove the need for an LoA. For reasons of safety and flight efficiency, it is in the best interests of ANSP's ATS provider's and airspace users to have a more optimised airspace design that does not require these dependencies and we feel that this more general point should be reflected in the Design Principle

Best regards,

Airspace Officer, Southdown Gliding Club Ltd.

Dear Sir/Madam

FASI-South Airspace Change Proposal (ACP-2022-038) Design Principles- March 2023

Thank you for engaging with Surrey County Council on your proposed design principles for airspace change proposal ACP-2022-038.

Air Navigation Guidance 2017 seeks to protect the tranquillity of the AONB and we would like to see this reflected in the proposed design principles. We suggest that Design Principle 2 should include being in accord with Air Navigation Guidance and other relevant national policy and legislation as well as being in accord with the Airspace Modernisation Strategy. The design of new flightpaths will need to consider the proposed extensions to the Surrey Hills AONB.

It is unclear in design principles 4 and 6 if there is any relative priority of principles a-d in each and it would be helpful if this could be clarified. We would also like to see Farnborough Airport recognise the importance of respite from noise as mitigation for local communities who might experience greater concentration of flight paths.

We would like to take this opportunity to emphasise that every effort must be made to ensure that all Surrey communities likely to be affected are kept informed of future consultations on airspace change proposals at Farnborough Airport and that residents are given the opportunity to attend events to enable their full participation.

Yours sincerely

Dear [REDACTED]

Thank you for email and consultation. I am sorry I was away for the meetings between 1 and 3 March.

The most serious concern in Farnborough Airport's Proposed Design Principles is the omission of the need, where possible, to avoid disrupting the tranquillity of an AONB. The Surrey Hills AONB to the south is the nearest AONB. I understand that the design relates to flying below 7,000 feet.

Mention is made earlier under noise in Workshop 2 to Section 62 of the Environment Act 1995 relating to National Parks. But at least, just as relevant in the case of Farnborough, is Section 85 of the Countryside and Rights of Way Act 2000. It requires public bodies such as yourselves to have regard in its decisions to the purposes of AONB designation.

The most important quality of AONBs, and the Surrey Hills AONB in particular, in relation to this project is their relative tranquillity. As they enjoy low ambient noise levels and parts of the Surrey Hills AONB are elevated and therefore closer to the noise source of an aircraft, it is suggested this is an important factor to take into account. Directly relevant to this is the growing recognition that being able to seek refuge from the tranquillity of an AONB is important to people's health and wellbeing. The medical profession is increasingly encouraging this. The Surrey Hills AONB is an especially important asset as it is close to large populations where the stress created by modern living in this part of the country is possibly the most severe.

The Guidance from DEFRA on the operation of the duty under S.85 of the Countryside and Rights of Way Act (often known as the CROW Act) is that the duty applies "to any decisions or activities an authority may take affecting land in these areas; not just to those that relate to narrowly defined environmental or 'countryside' issues.'

It is appreciated this factor has to be balanced in your final decisions with other important and possibly conflicting factors. But it really ought to feature as one of your design principles. I suggest something along the following lines might be appropriate under section 6 - lateral changes in the table of the concluding Proposed Design Principles - "avoid disturbing the tranquillity of an AONB"

I expect you will want to add the above. But if it is chosen not to do so, you may wish first to gain legal advice to be satisfied you would not be opening yourselves up to legal challenge under S.85 of the CROW Act 2000.

Regards,

[REDACTED]
Surrey Hills AONB Planning Adviser

			Environmental Groups/ Organisations (3)	Industry (16)	Local Authorities/ Council (4)	Local Community Groups (2)			
N1	Workshop 1	Must enable improved vertical profiles compared to the baseline published SID/STAR levels	SA - 1 NAND - 2	SA - 6 A - 3 NAND - 4 D - 2	A - 1 NAND - 2	A - 1 NAND - 1	Farnborough Airport have attempted to incorporate many of these suggestion into DPs 4&6.	During the phase 2 workshops it was suggested that Farnborough should be aiming to achieve improved vertical profiles as much as	DP4 Improve vertical profiles compared to the baseline published SID/STAR levels, to enable:

							<p>DP4 Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable:</p>	<p>possible and so reference to 7000ft should be removed.</p>	
N2	Workshop 1	<p>Should reduce the frequency of overflight for the same populations where possible by:</p> <ul style="list-style-type: none"> a) Departure routes which diverge as early as possible and stay apart as long as possible b) Arrival routes which converge as late as possible c) Farnborough's arrival & departure flight paths avoiding overflight of the same populations d) Avoiding routes to/from Heathrow, Gatwick and Farnborough overflying the same communities. 	SA - 1 A - 2	SA - 1 A - 7 NAND - 5 D - 1 SD - 1 SNBC - 1	SA - 2 A - 2	A - 1	<p>Farnborough Airport have attempted to incorporate many of these suggestions in DP4 & DP6</p> <p>DP4a Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable:</p> <ul style="list-style-type: none"> a. a reduction in total population affected by noise below 7000ft <p>DP6 Where lateral changes are required to achieve improved environmental and operational performance, options should:</p> <ul style="list-style-type: none"> b. minimise populations newly overflown c. avoid overflying the same communities with multiple routes to & from Farnborough Airport d. avoid overflying the same communities with Farnborough routes and those routes from other airports below 7000ft 	<p>During the phase 2 workshops it was suggested that Farnborough should be aiming to achieve improved vertical profiles as much as possible and so reference to 7000ft should be removed.</p> <p>FARA suggested that reference to 7000ft in DP4a was not in line with ANG17, Farnborough Airport agreed with this & removed it.</p> <p>NATS suggested a re-wording of DP6d, however Farnborough felt this was unnecessary.</p> <p>FARA suggested that DP6b be changed to "avoid", this would constrain the ability to make any lateral changes at all below 7000ft.</p> <p>Following the phase 2 workshops, Farnborough Airport decided to add the word 'numbers' to DP4a & 6b to help clarify what will be assessed in Stage 2, also the phrase 'to existing tracks' to DP6, to avoid any confusion later in the process.</p>	<p>DP4 Improve vertical profiles compared to the baseline published SID/STAR levels, to enable:</p> <ul style="list-style-type: none"> a. a reduction in total population numbers affected by noise <p>DP6 Where lateral changes to existing tracks are required to achieve improved environmental and operational performance, options should:</p> <ul style="list-style-type: none"> b. minimise population numbers newly overflown c. avoid overflying the same communities with multiple routes to & from Farnborough Airport d. avoid overflying the same communities with Farnborough routes and those routes from other airports below 7000ft

² SA = Strongly Agree, A= Agree, NAND= Neither agree not disagree, D= Disagree, SD= Strongly Disagree, SNBC = Should not be considered

<p>N3</p>	<p>Workshop 1</p>	<p>Should minimise the impact of change on communities by minimising the number of people newly overflowed by Farnborough's flight paths.</p>	<p>SA - 1 A - 2</p>	<p>SA - 1 A - 4 NAND - 8 D - 3</p>	<p>A - 3 D - 1</p>	<p>A - 1 NAND - 1</p>	<p>Farnborough Airport have attempted to incorporate this suggestion into DP6a.</p> <p>DP6 Where lateral changes are required to achieve improved environmental and operational performance, options should: b. minimise populations newly overflowed</p>	<p>FARA suggested that DP6b be changed to "avoid", this would constrain the ability to make any lateral changes at all below 7000ft.</p> <p>Following the phase 2 workshops, Farnborough Airport decided to add the phrase 'to existing tracks' to DP6, to avoid any confusion later in the process. Also, Farnborough Airport decided to add the word 'numbers' to DP6b to help clarify what will be assessed in Stage 2.</p>	<p>DP6 Where lateral changes to existing tracks are required to achieve improved environmental and operational performance, options should: b. minimise population numbers newly overflowed</p>
<p>N4</p>	<p>Workshop 2</p>	<p>Avoid overflight of AONBs and National Parks</p>	<p>SA - 3</p>	<p>A - 5 NAND - 11</p>	<p>SA - 1 A - 3</p>	<p>NAND - 2</p>	<p>Farnborough Airport believes this suggestion is already covered by Air Navigation 2017 and as such, must be adhered to.</p>	<p>Farnborough Airport received feedback asking for specific inclusion of AONB's to the design principles.</p> <p>As a result, DP2 has been reworded to remove unnecessary language and make reference to Air Navigation 2017, which specifically references how National Parks & AONBs should be considered during airspace change proposals.</p>	<p>DP2 Accord with; a. the CAA's published airspace modernisation strategy (CAP1711) and any current or future plans associated with it; b. Air Navigation Guidance 2017 & other relevant policy and legislations</p>
<p>N5</p>	<p>Workshop 2</p>	<p>Avoid overflight of rural areas with low ambient noise</p>	<p>SA - 2 A - 1</p>	<p>SA - 1 A - 1 NAND - 12 D - 1 SNBC - 1</p>	<p>A - 3 NAND - 1</p>	<p>SA - 1 A - 1</p>	<p>Farnborough Airport believes this contradict other design principles and Government Policy.</p>	<p>Some stakeholders queried the reason that this was not included in the final list. One of the government's key environmental objectives is to limit and, where possible, reduce the number of people in the UK significantly affected by adverse impacts from aircraft noise. Consequently, this is likely to mean that one of the key principles involved in airspace design will require avoiding over-flight of more densely populated areas below 7000ft (ANG 2017). We felt that having a specific design principle to 'avoid overflying</p>	

								<p>rural areas with low ambient noise' would be a contradiction of this policy owing to rural areas having lower population numbers living within them. This does not mean that rural areas will therefore be preferred for route placement all the way to/from 7000ft as ANG2017 states "where practicable, it is desirable that airspace routes below 7000ft should seek to avoid flying over AONB and National Parks" and it also requires sponsors to take account of local circumstances.</p>	
N6	Workshop 3	Avoid populations being newly overflown	SA - 1 NAND - 1	SA - 1 A - 4 NAND - 6 D - 5	A - 3 SD - 1	NAND - 2	<p>Farnborough Airport have attempted to incorporate this suggestion into DP6a.</p> <p>DP6 Where lateral changes are required to achieve improved environmental and operational performance, options should: b. minimise populations newly overflown</p>	<p>FARA suggested that DP6b be changed to "avoid", this would constrain the ability to make any lateral changes at all below 7000ft.</p> <p>Following the phase 2 workshops, Farnborough Airport decided to add the phrase 'to existing tracks' to DP6, to avoid any confusion later in the process. Also, Farnborough Airport decided to add the word 'numbers' to DP6b to help clarify what will be assessed in Stage 2.</p>	<p>DP6 Where lateral changes to existing tracks are required to achieve improved environmental and operational performance, options should: b. minimise population numbers newly overflown</p>
N7	Workshop 3	Should be an overall noise benefit	SA - 1 A - 2	SA - 3 A - 7 NAND - 6	A - 4	SA - 1 A - 1	<p>Farnborough Airport have attempted to incorporate this suggestion into DP6a.</p> <p>DP6 Where lateral changes are required to achieve improved environmental and operational performance, options should: b. minimise populations newly overflown</p>	<p>FARA suggested that DP6b be changed to "avoid", this would constrain the ability to make any lateral changes at all below 7000ft.</p> <p>Following the phase 2 workshops, Farnborough Airport decided to add the phrase 'to existing tracks' to DP6, to avoid any confusion later in the process. Also, Farnborough Airport decided to add the word 'numbers' to DP6b to help clarify what will be assessed in Stage 2.</p>	<p>DP6 Where lateral changes to existing tracks are required to achieve improved environmental and operational performance, options should: b. minimise population numbers newly overflown</p>

N8	Workshop 3	Disperse/share the noise	SA - 1 A - 1 NAND - 1	A - 9 NAND - 6	SA - 3 A - 1	A - 1 NAND - 1	<p>Farnborough Airport have attempted to incorporate this suggestion into DP6c, as this would result in sharing the noise.</p> <p>DP6 Where lateral changes are required to achieve improved environmental and operational performance, options should: c. avoid overflying the same communities with multiple routes to & from Farnborough Airport</p>	<p>Following the phase 2 workshops, Farnborough Airport decided to add the phrase 'to existing tracks' to DP6, to avoid any confusion later in the process.</p>	<p>DP6 Where lateral changes to existing tracks are required to achieve improved environmental and operational performance, options should: c. avoid overflying the same communities with multiple routes to & from Farnborough Airport</p>
N9	Workshop 3	Should provide predictable respite	A - 3	A - 6 NAND - 9 D - 1	SA - 2 A - 2	A - 2	<p>This was not included, as Farnborough Airport feel that the proposed design principles and their prioritisation aim to firstly improve the existing arrangements in the vertical plane (DP4) and then, where lateral changes to existing tracks are require, avoid overflying communities with multiple routes (DP6c) to share the noise where possible.</p>		
N10	Workshop 3	Should offer routes with enhanced profiles for days when weather increases noise impacts (e.g. Temperature Inversions)	A - 1 NAND - 2	A - 6 NAND - 5 D - 3 SD - 1 SNBC - 1	A - 3	SA - 1 A - 1	<p>This was not included, as Farnborough Airport feel that the most optimal design, we can create should be used by everyone. If more optimal profiles can be achieved, we would want them flown all the time.</p>

Airspace & Aircraft Capabilities / Technology	Proposed by	Stakeholder Proposed Principle	Summary of Phase 1 Feedback ⁴				Farnborough Rationale & Outcome after Phase 1	Summary of Phase 2 Feedback/ Analysis	Outcome
			Environmental Groups/ Organisations (3)	Industry (16)	Local Authorities/ Council (4)	Local Community Groups (2)			
AA1	Farnborough Airport	Must meet forecast demand for Farnborough Airport	SA - 1 NAND - 1 D - 1	SA - 5 A - 9 NAND - 2	SA - 1 A - 1	D - 2	Farnborough Airport have incorporated this into DP3. DP3 Accommodate forecast demand for Farnborough Airport.	During the Phase 2 workshops a re-wording was suggested by stakeholders, which Farnborough agreed to implement.	DP3 Shal not constrain the ability to meet forecast demand for Farnborough Airport
AA2	Workshop 1, 2	Must enable a reduction in the total volume of CAS	SA - 1 NAND - 2	SA - 4 A - 4 NAND - 5 D - 3	NAND - 1	A - 1 NAND - 1	Farnborough have attempted to incorporate these suggestions into DP4c. DP4 Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable: c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS	During the phase 2 workshops it was suggested that Farnborough should be aiming to achieve improved vertical profiles as much as possible and so reference to 7000ft should be removed.	DP4 Improve vertical profiles compared to the baseline published SID/STAR levels, to enable: c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS
AA3	Workshop 1,3,4	Should reduce complexity of airspace, simplicity in boundaries (but a reduction in CAS is the priority oversimplification)	A - 2 NAND - 1	SA - 4 A - 6 NAND - 5 SNBC - 1	NAND - 1	NAND - 2	Farnborough have attempted to incorporate these suggestions into D 4d. DP4 Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable: d. a reduction in the reliance on tactical intervention	During the phase 2 workshops it was suggested that Farnborough should be aiming to achieve improved vertical profiles as much as possible and so reference to 7000ft should be removed.	DP4 Improve vertical profiles compared to the baseline published SID/STAR levels, to enable: d. a reduction in the reliance on tactical intervention
AA4	Workshop 1	Must enable a reduction in workload per flight	A - 2 NAND - 1	SA - 1 A - 7 NAND - 3 D - 2 SNBC - 2	NAND - 1	NAND - 2			
AA5	Workshop 2	The airspace design should increase systemisation and reduce tactical intervention by ATC	NAND - 3	SA - 3 A - 12 NAND - 1	NAND - 1	NAND - 2			

⁴ SA = Strongly Agree, A= Agree, NAND= Neither agree nor disagree, D= Disagree, SD= Strongly Disagree, SNBC = Should not be considered

							d. a reduction in the reliance on tactical intervention		
AA6	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	A - 1 NAND - 2	SA - 7 A - 5 NAND - 3 D - 1	NAND - 1	NAND - 2	Farnborough Airport have attempted to incorporate these suggestions into DP7. DP7 Make best use of Farnborough's modern aircraft fleet capabilities	NATS felt that this was unclear and might be difficult to evaluate at Stage 2, however Farnborough airport are satisfied with the current wording.	DP7 Make best use of Farnborough's modern aircraft fleet capabilities
AA7	Workshop 2, 3, 4	Designs should be based on RNP1 + RF as a minimum.	NAND - 3	SA - 1 A - 6 NAND - 6 D - 2 SNBC - 1	NAND - 1	NAND - 2			
AA8	Workshop 2	Designs should investigate use of Advanced RNP (0.3) and RNP-AR as these may help to enable a reduction in the volume of CAS	A - 1 NAND - 2 -	SA - 3 A - 7 NAND - 3 D - 1 SNBC - 2	NAND - 1	NAND - 2			
AA9	Workshop 3, 4	Reduce the amount of CAS, particularly in the vertical (higher bases of CAS)	A - 1 NAND - 2	SA - 4 A - 6 NAND - 4 D - 1 SNBC - 1	NAND - 1	NAND - 2	Farnborough have attempted to incorporate these suggestions into DP 4c DP4 Improve vertical profiles compared to the baseline published SID/STAR levels below 7000ft, to enable c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS	During the phase 2 workshops it was suggested that Farnborough should be aiming to achieve improved vertical profiles as much as possible and so reference to 7000ft should be removed.	DP4 Improve vertical profiles compared to the baseline published SID/STAR levels, to enable: c. a reduction in the volume and where possible, complexity of Farnborough Airport's CAS
AA10	Workshop 3	Consider use of different airspace classifications	NAND - 3	SA - 2 A - 6 NAND - 6 SNBC - 1	NAND - 1	NAND - 2	Farnborough Airport have not incorporated these suggestions, as these are refinements which could be determined through consultation. There are too many variables to consider at Stage 2 of the process, which is to first understand the airspace		
AA11	Workshop 3	Consider flexible use of airspace	A - 1 NAND - 2	SA - 5 A - 7 NAND - 3 SNBC - 1	A - 1	NAND - 2			

							design (constructs) available.		
AA12	Workshop 3, 4	Should capitalise on Farnborough airport's aircraft performance capabilities	A - 1 NAND - 2	SA - 2 A - 9 NAND - 2 SNBC - 3	SA - 2	A - 1 NAND - 1	Farnborough Airport have attempted to incorporate these suggestions into DP7.	NATS felt that this was unclear and might be difficult to evaluate at Stage 2, however Farnborough airport are satisfied with the current wording.	DP7 Make best use of Farnborough's modern aircraft fleet capabilities
AA13	Workshop 4	The PBN specification should maximise benefit, not cater for the lowest common denominator.	NAND - 3	SA - 4 A - 5 NAND - 4 D - 1 SNBC - 2	NAND - 1	NAND - 1	DP7 Make best use of Farnborough's modern aircraft fleet capabilities		
AA14	Workshop 4	Should result in an overall benefit to the airways traffic into and out of Farnborough 'clutch' airfields	A - 1 NAND - 2	SA - 1 A - 7 NAND - 5 D - 1 SD - 2	NAND - 1	NAND - 2	Farnborough Airport initially decided not to include this suggestion, as this is Farnborough's ACP, and the objectives are focussed on Farnborough's operations.	Feedback during the Phase 2 workshops demonstrated how important local industry stakeholders felt this proposal was. Farnborough Airport decided to add an additional principle to cover this.	DP8 Ensure that Farnborough Clutch airways traffic can still be accommodated, as a result of the changes

Additional Suggestions from Stakeholders

Stakeholder	Suggested Design Principle	Farnborough Phase 1 Analysis & Outcome	Farnborough Phase 1 Analysis & Outcome
BGA	Maintain safe operations in and around the proposed airspace design	We believe this suggestion is covered by DP1	
BGA	Minimum impact to GA operations	We believe this suggestion is covered by DP1, 2 and 4	Phase 2 feedback stated that stakeholders would like to see reference to minimise impact to other airspace users, so this was added to DP5.
MOD	Minimise impact on other airspace users – can be by minimising CAS requirements (cognisant of containment policy, you should only request what is required), different classifications of airspace, minimising activation times/planning for future dynamic airspace activation, enabling access for other airspace users. It may not be appropriate to reduce CAS if the new routes require the same volume for containment.	We believe this suggestion is covered by DP2 and 4	
Southampton Airport	Farnborough's design should aim to remove dependencies with Southampton ATC in order that the two airports can operate with the minimum of interactions. The arrival transitions and departure procedures shall be deconflicted from, and integrate with, the en-route network and Southampton Airport.	This suggestion has been partly incorporated into our final list of design principles. DP5 Aim to remove dependencies with adjacent ATC units	DP5 Aim to remove dependencies with adjacent ATC units and minimise impacts to other airspace users

FARNBOROUGH AIRPORT FASI-S AIRSPACE CHANGE PROPOSAL

ACP-2022-038

APPENDIX F FREQUENTLY ASKED QUESTIONS

VERSION 2.0

Version	Date
1.0	December 2022
2.0	March 2023

Frequently Asked Questions (December 2022)

Q. What impact does the previous airspace change proposal/current PIR have on this airspace change proposal?

A. The 2 airspace changes are completely separate, the previous ACP was undertaken under CAP725 and this proposal is following the [CAP1616](#) process. However, the outcome of the Post Implementation Review (PIR) (currently underway), for the airspace change that was implemented in 2020, could have an impact on this proposal, in terms of timelines, requirements and establishing the baseline used to compare our options against.

Q. What baseline will be used for this airspace change proposal?

A. The baseline for this airspace change proposal will need to be set in Stage 2. The outcome of the PIR may have an impact on the baseline.

Q. Will all the different airports routes be integrated?

A. The existing airspace design is currently integrated. The aim for the FASI-S programme is that the future routes will be more efficiently managed than today. Farnborough Airport being part of the overall programme means that we can work with the surrounding airports and aim to create the optimal design for all.

Q. How is the statutory requirement to have regard for AONBs/National Parks factored in?

A. Air Navigation Guidance 2017 states that “*where practicable, it is desirable that airspace routes below 7,000 feet should seek to avoid flying over Areas of Outstanding Natural Beauty (AONB) and National Parks*”. This will be factored in during the options design and assessment stage of the CAP1616 process (Stage 2). Multiple options will be developed, and some will have more regard for AONBs/National Parks than others. This will allow us to understand the trade-offs between competing policy objectives.

Q. What are Farnborough Airport hoping to achieve from this airspace change, that they couldn't achieve from the previous change?

A. The previous airspace change proposal was constrained by the surrounding route network within Controlled Airspace. For this proposal, all the surrounding airports are making changes, which means the opportunity for change and the improvement of Farnborough's airspace is increased.

Q. Is Farnborough Airport closing an option?

A. No.

Q. Is the amount of aircraft movements at Farnborough Airport going to increase?

A. The aim of this airspace change proposal is to make the current operations at Farnborough Airport as efficient as possible, until the existing cap of air traffic movements is realised. Any increase in numbers of aircraft movements above the existing cap would have to go through a separate standalone planning process with Rushmoor Borough Council.

Q. Where can I find out more information about airspace change?

A. The full CAP1616 Airspace Change Process can be found [here](#). The UK Airspace Modernisation Programme can be found [here](#). Further information on the Airspace Change Organising Group (ACOG) and One Sky One Plan can be found [here](#) and [here](#).

Frequently Asked Questions (updated March 2023)

Q. What impact does the previous airspace change proposal/current PIR have on this airspace change proposal?

A. The 2 airspace changes are completely separate. The previous ACP was undertaken under CAP725 and this proposal is following the [CAP1616](#) process. However, the outcome of the Post Implementation Review (PIR) for the airspace change that was implemented in 2020, could have an impact on this proposal, in terms of timelines, requirements and establishing the baseline used to compare our options against.

Q. What baseline will be used for this airspace change proposal?

A. The baseline for this airspace change proposal will need to be set in Stage 2. The outcome of the PIR may have an impact on the baseline.

Q. Will all the different airports routes be integrated?

A. The existing airspace design is currently integrated. The aim for the FASI-S programme is that the future routes will be more efficiently managed than today. Farnborough Airport being part of the overall programme means that we can work with the surrounding airports and aim to create the optimal design for all.

Q. How is the statutory requirement to have regard for AONBs/National Parks factored in?

A. Air Navigation Guidance 2017 states that “*where practicable, it is desirable that airspace routes below 7,000 feet should seek to avoid flying over Areas of Outstanding Natural Beauty (AONB) and National Parks*”. This will be factored in during the options design and assessment stage of the CAP1616 process (Stage 2). Multiple options will be developed, and it is likely that some could have more regard for AONBs/National Parks than others. This will allow us to understand the trade-offs between competing policy objectives.

Q. What are Farnborough Airport hoping to achieve from this airspace change, that they couldn't achieve from the previous change?

A. The previous airspace change proposal was constrained by the surrounding route network within Controlled Airspace. For this proposal, all the surrounding airports are making changes, which means the opportunity for change and the improvement of Farnborough's airspace and flight paths is increased.

Q. Is Farnborough Airport closing an option?

A. No.

Q. Is the amount of aircraft movements at Farnborough Airport going to increase?

A. The aim of this airspace change proposal is to make the current operations at Farnborough Airport as efficient as possible. Any increase in numbers of aircraft movements above the existing cap would have to go through a separate standalone planning process with Rushmoor Borough Council.

Q. Where can I find out more information about airspace change, in general?

A. The full CAP1616 Airspace Change Process can be found [here](#). The UK Airspace Modernisation Programme can be found [here](#). Further information on the Airspace Change Organising Group (ACOG) and One Sky One Plan can be found [here](#) and [here](#).

Q. Where can I find out more about this airspace change proposal?

A. You can find out more information on this airspace change proposal and follow its progress on the CAA Portal [here](#).

Q. How will any data used, particularly forecasts be verifiable? Including details of all assumptions?

A. The data sets used, including forecasts and assumptions will be articulated within our ACP documentation at the relevant stages.

Q. How will forecast traffic levels be validated?

A. Farnborough's forecast traffic levels will be compared to NATS and Eurocontrol regional forecasts.

Q. Will RNP approaches with a steeper approach profile be investigated?

A. Farnborough's existing Instrument Landing System (ILS) glide path approach angle is at 3.5°. We will be investigating if RNP Approaches into Farnborough are possible, and the maximum angle permitted for those is 3.5°. However, there is added complexity in that the air temperature affects the glide slope angle of RNP Approaches and therefore 3.5° may not be possible for those. However, even with RNP Approaches, we would still expect the main landing aid to continue to be the ILS.

Q. Have stakeholders been able to comment on the Statement of Need?

A. No. The Statement of Need is in Step 1A of Stage 1 of the CAP1616 process. It is written by the sponsor of the airspace change proposal (Farnborough Airport) setting out what airspace issue or opportunity the sponsor is seeking to address. Stakeholders are not engaged until Step 1B of Stage 1, Design Principles.

Q. What impact will a potentially smaller volume of controlled airspace have on the ability to provide respite?

A. It is likely that the more routes Farnborough has, the more controlled airspace will be needed to contain them. The pros and cons of multiple routes versus fewer routes needs to be considered during the ACP.

Q. What population data will be used for environmental impact assessments?

A. We will use [CACI](#) population forecast data sets.

Q. Why are Farnborough Airport carrying out this ACP?

A. One of the most important initiations of the Airspace Modernisation Strategy is to upgrade the airspace structure and the route network that serves London and the Southeast of the UK. All the other airport surrounding Farnborough, including Heathrow, Gatwick, Southampton, and Bournemouth are part of this initiative and are going through their own proposals to

change their airspace, and NATS NERL are upgrading the route structure above 7000ft. This widescale change presents Farnborough with the opportunity to improve CCO/CDO performance for Farnborough operations, reduce the volume of Controlled Airspace, create the capacity for efficient growth, appropriately manage the adverse effects of aircraft noise and to reduce CO₂ emissions. For further details, please see the Statement of Need on the CAA Portal, [here](#).

Q. How will the Farnborough Air Show be accommodated in a new airspace design?

A. For previous years, Restricted Airspace (Temporary) and Temporary Holds have been established alongside the existing Farnborough controlled airspace. The same approach will be taken in the future.

Q. Will the principles of CAP1378 PBN Departure and Arrivals Mitigations be considered?

A. Yes, CAP1378 will be referenced during the ACP process.

Q. Will the Use of PBN Route Spacing and CAS Containments in CAP1385 be considered?

A. Yes, CAP1385 and the CAA's Controlled Airspace Containment Policy will be referenced during the ACP process.

Q. Is visual amenity being considered?

A. CAP1616 only makes reference to the consideration of the negative impact upon tranquillity or visual intrusion in Areas of Outstanding Natural Beauty or National Parks.

Q. Will new routes consider mitigating the effects on Air Quality Management Areas (AQMA's)?

A. Farnborough Airport will undertake a qualitative assessment, reviewing available air quality data from monitoring (including from the local authorities) and modelling (including the Defra background maps), to determine if there is a credible risk of significant air quality impacts from any airspace change at Farnborough, such as an exceedance of air quality objectives or worsening of an existing exceedance. The results of these qualitative assessments will be used to determine if there is a need for a full, quantitative assessment of any options. The area surrounding Farnborough Airport is not currently situated within an AQMA.

Q. Will the Transition Altitude be raised from 6000ft?

A. No. The AMS refers to "*a transition altitude standardised at one altitude across UK airspace, for example 6,000 feet*".

Q. What is controlled/uncontrolled airspace?

A. In the UK there are two types of airspace, controlled airspace, and uncontrolled airspace. Controlled airspace is usually established around airports and to protect its users, mainly commercial airlines. Pilots must obtain a clearance from Air Traffic Control (ATC) to enter controlled airspace. In uncontrolled airspace, aircraft may fly when and where they like (subject to a set of rules). There is no legal requirement for pilots to communicate with ATC. Further information can be found [here](#).

Q. How does the adjacent airports, (Heathrow, Gatwick, and Southampton) being ahead of Farnborough Airport in the process effect this ACP?

A. The FASI airspace programme is being coordinated by ACOG and the Masterplan. The Masterplan is currently in Iteration 2 and more information can be found [here](#). As Farnborough Airport joined the programme after Iteration 2 was published, there is no mention of the airport, however all future iterations will include Farnborough Airport. The masterplan states that no interdependent ACP will be able to proceed to public consultation on proposed options until a system-wide airspace design of the proposed options and their cumulative impacts are represented. Therefore, although other dependent airports are currently ahead of Farnborough, those ACPs will all need to be aligned in Stage 3.
